Reaction Detection In Liquid Chromatography:

Reaction Detection in Liquid Chromatography Ira S. Krull, 2017-10-19 The first book to focus entirely on reactions for analyte detection and characterization *Reaction Detection in Liquid Chromatography* depicts off and on line pre and postcolumn approaches that have been successfully used for many classes of compounds both organic and inorganic in high performance liquid chromatography The book gives special attention to methods and instrumentation associated with postcolumn reaction detection discussing theory background principles and equations and also highlights major areas of reaction chemistry such as immobilized or solution enzymatic reactions homogeneous solution chemistry photochemical derivatization paired ion reagents solid phase and solid supported reagents and reactions for inorganic species In addition *Reaction Detection in liquid Chromatography* details the efficiencies of the various reactions surveyed forecasts how the utility of each reaction is likely to be enhanced by new research and gives data that will allow the reader to reproduce reaction detection approaches for new analytes and samples *Reaction Detection in Liquid Chromatography* is essential reading for analytical bioanalytical quality control and research and development chemists It also comprises a fine reference for analysts involved in development and applications of liquid chromatography for specific qualitative and quantitative analyte identification and in house professional seminars *Reaction Detection in Liquid Chromatography (Volume 34)*. Krull IS., 1986 *Handbook of Derivatization Reactions for HPLC* George Lunn, Louise C. Hellwig, 1998-08-25 Thousands of derivatization procedures for HPLC and CE an essential tool for today's analytical chemist This valuable reference offers fast and convenient access to derivatization reactions for both HPLC and capillary electrophoresis CE Covering a wide variety of compounds from pharmaceutical drugs and biological products to industrial contaminants it is organized first by functional group and then by individual reagents Techniques for each functional group are described in sufficient detail that the researcher can replicate procedures without reference to the original publications saving hours of tedious library research And because detailed procedures for the same reagent are listed together it is easy to combine features of different methods and tailor them to fit specific individual requirements Also available on CD ROM *Handbook of Derivatization Reactions for HPLC* contains fully abstracted and evaluated procedures from more than 1 900 papers with descriptions of hundreds of reagents A further 3 000 papers are referenced in bibliographies that are clearly annotated to help analysts identify those sources likely to be most useful This important new resource will be welcomed by chemists working in pharmaceutical biomedical and environmental analysis Also available on CD ROM System requirements IBM compatible PC 486 or better and Windows 3.0 or higher or Macintosh 68030 processor and System 7 or higher CD ROM drive and 8 MB RAM minimum 5 MB free hard disk space minimum 30 MB recommended for full installation **Post-column Reaction Detection in Liquid Chromatography** Augustinus Hendrikus Maria Theresia Scholten, 1981* **Electrochemical Detection Techniques in the Applied Biosciences** Guy Alain Junter, 1988 **Liquid Chromatography**, 1985 *Gas and Liquid*

Capillary Liquid Chromatography Boris Grigor'evich Belen'kii, E.S. Gankina, Èmilii Savel'evna Gankina, 1987-03-31 In the early 1980s capillary liquid chromatography was being established it was a period in which only a few research groups published a relatively small number of papers on the subject Interest has since taken off and a period of intense development to which no end is yet in sight is now upon us More investigators and instrument making firms are now entering the field This greater interest has resulted in the rapid appearance of two collections 1 2 and a series of topical reviews 3 6 However it could hardly be said that all the problems in this area have been formulated let alone solved The preparation of very efficient open tubular or packed microbore columns for example remains more an art than a science while the relationship between radial and longitudinal mass transfer and the effect of transcolumn velocity profiles on chromatographic efficiency have been very poorly studied Indeed recent publications on these subjects have sometimes far from clarifying matters only muddied them further Many instrument making firms are trying to unify their equipment so that it is suitable for microbore conventional analytical and preparative liquid chromatography This approach has not realized the full potential of capillary chromatography and there also remains room for improving the performance of capillary columns Liquid
