Pearl,   <u>Fuzzy Logic in Intelligent System Design</u> Patricia Melin,Oscar Castillo,Janusz Kacprzyk,Marek Reformat,William Melek,2017-09-30 This book describes recent advances in the use of fuzzy logic for the design of hybrid intelligent systems based on nature inspired optimization and their applications in areas such as intelligent control and robotics pattern recognition medical diagnosis time series prediction and optimization of complex problems Based on papers presented at the North American Fuzzy Information Processing Society Annual Conference NAFIPS 2017 held in Cancun Mexico from 16 to 18 October 2017 the book is divided into nine main parts the first of which first addresses theoretical aspects and proposes new concepts and algorithms based on type 1 fuzzy systems The second part consists of papers on new concepts and algorithms for type 2 fuzzy systems and on applications of type 2 fuzzy systems in diverse areas such as time series prediction and pattern recognition In turn the third part contains papers that present enhancements to meta heuristics based on fuzzy logic techniques describing new nature inspired optimization algorithms that use fuzzy dynamic adaptation of parameters The fourth part presents emergent intelligent models which range from quantum algorithms to cellular automata The fifth part explores applications of fuzzy logic in diverse areas of medicine such as the diagnosis of hypertension and heart diseases The sixth part describes new computational intelligence algorithms and their applications in different areas of intelligent control while the seventh examines the use of fuzzy logic in different mathematic models The eight part deals with a diverse range of applications of fuzzy logic ranging from environmental to autonomous navigation while the ninth covers theoretical concepts of fuzzy models

    Modeling and Reasoning with Bayesian Networks Adnan Darwiche,2009-04-06 This book is a thorough introduction to the formal foundations and practical applications of Bayesian networks It provides an extensive discussion of techniques for building Bayesian networks that model real world situations including techniques for synthesizing models from design learning models from data and debugging models using sensitivity analysis It also treats exact and approximate inference algorithms at both theoretical and practical levels The treatment of exact algorithms covers the main inference paradigms based on elimination and conditioning and includes advanced methods for compiling Bayesian networks time space tradeoffs and exploiting local structure of massively connected networks The treatment of approximate algorithms covers the main inference paradigms based on sampling and optimization and includes influential algorithms such as importance sampling MCMC and belief propagation The author assumes very little background on the covered subjects supplying in depth discussions for theoretically inclined readers and enough practical details to provide an algorithmic cookbook for the system
