Probabilistic Metric Spaces:

Probabilistic Metric Spaces B. Schweizer,A. Sklar,2011-10-14 This distinctly nonclassical treatment focuses on developing aspects that differ from the theory of ordinary metric spaces working directly with probability distribution functions rather than random variables The two part treatment begins with an overview that discusses the theory s historical evolution followed by a development of related mathematical machinery The presentation defines all needed concepts states all necessary results and provides relevant proofs The second part opens with definitions of probabilistic metric spaces and proceeds to examinations of special classes of probabilistic metric spaces topologies and several related structures such as probabilistic normed and inner product spaces Throughout the authors focus on developing aspects that differ from the theory of ordinary metric spaces rather than simply transferring known metric space results to a more general setting **On Nonsymmetric Topological and Probabilistic Structures** Yeol Je Cho,Mariusz Grabiec,Viorel Radu,2006 In this book generally speaking some properties of bitopological spaces generated by certain non symmetric functions are studied These functions called probabilistic quasi pseudo metrics and fuzzy quasi pseudo metrics are generalisations of classical quasi pseudo metrics For the sake of completeness as well as for convenience and easy comparison most of the introductory paragraphs are mainly devoted to fundamental notions and results from the classical deterministic or symmetric theory

Fixed Point Theory in Probabilistic Metric Spaces Olga Hadžić,1995 **Fixed Point Theory in Probabilistic Metric Spaces** O. Hadzic,Endre Pap,2001-11-30 Fixed point theory in probabilistic metric spaces can be considered as a part of Probabilistic Analysis which is a very dynamic area of mathematical research A primary aim of this monograph is to stimulate interest among scientists and students in this fascinating field The text is self contained for a reader with a modest knowledge of the metric fixed point theory Several themes run through this book The first is the theory of triangular norms t norms which is closely related to fixed point theory in probabilistic metric spaces Its recent development has had a strong influence upon the fixed point theory in probabilistic metric spaces In Chapter 1 some basic properties of t norms are presented and several special classes of t norms are investigated Chapter 2 is an overview of some basic definitions and examples from the theory of probabilistic metric spaces Chapters 3 4 and 5 deal with some single valued and multi valued probabilistic versions of the Banach contraction principle In Chapter 6 some basic results in locally convex topological vector spaces are used and applied to fixed point theory in vector spaces Audience The book will be of value to graduate students researchers and applied mathematicians working in nonlinear analysis and probabilistic metric spaces **Probability Measures on Metric Spaces** K. R. Parthasarathy,2014-07-03 Probability Measures on Metric Spaces presents the general theory of probability measures in abstract metric spaces This book deals with complete separable metric groups locally impact abelian groups Hilbert spaces and the spaces of continuous functions Organized into seven chapters this book begins with an overview of isomorphism theorem which states that two Borel subsets of complete separable metric spaces are

isomorphic if and only if they have the same cardinality This text then deals with properties such as tightness regularity and perfectness of measures defined on metric spaces Other chapters consider the arithmetic of probability distributions in topological groups This book discusses as well the proofs of the classical extension theorems and existence of conditional and regular conditional probabilities in standard Borel spaces The final chapter deals with the compactness criteria for sets of probability measures and their applications to testing statistical hypotheses This book is a valuable resource for statisticians

Nonlinear Operator Theory in Probablistic Metric Spaces Shih-sen Chang,Yeol Je Cho,Sin-min Kang,2001 The purpose of this book is to give a comprehensive introduction to the study of non linear operator theory in probabilistic metric spaces This book is introduced as a survey of the latest and new results on the following topics Basic theory of probabilistic metric spaces Fixed point theorems for single valued and multi valued mappings in probabilistic metric spaces Ekeland s variational principle and Caristi s fixed point theorem in probabilistic metric spaces Coincidence point theorems minimisation and fixed degree theorems in probabilistic metric spaces Probabilistic contractors accretive mappings and topological degree in probabilistic normed spaces Nonlinear semigroups and differential equations in probabilistic metric spaces KKM theorems minimax theorems and variational inequalities   **Fixed Point Theory in Probabilistic Metric Spaces** O.
