Probability In Banach Spaces 8 Proceedings Of The Eighth International Conference Progreb In Probability Vol 3: Probability in Banach Spaces, 8: Proceedings of the Eighth International Conference R.M. Dudley,M.G. Hahn,James Kuelbs,1992-10 Probability limit theorems in infinite dimensional spaces give conditions un der which convergence holds uniformly over an infinite class of sets or functions Early results in this direction were the Glivenko Cantelli Kolmogorov Smirnov and Donsker theorems for empirical distribution functions Already in these cases there is convergence in Banach spaces that are not only infinite dimensional but nonsep arable But the theory in such spaces developed slowly until the late 1970 s Meanwhile work on probability in separable Banach spaces in relation with the geometry of those spaces began in the 1950 s and developed strongly in the 1960 s and 70 s We have in mind here also work on sample continuity and boundedness of Gaussian processes and random methods in harmonic analysis By the mid 70 s a substantial theory was in place including sharp infinite dimensional limit theorems under either metric entropy or geometric conditions Then modern empirical process theory began to develop where the collection of half lines in the line has been replaced by much more general collections of sets in and functions on multidimensional spaces Many of the main ideas from probability in separable Banach spaces turned out to have one or more useful analogues for empirical processes Tightness became asymptotic equicontinuity Metric entropy remained useful but also was adapted to metric entropy with bracketing random entropies and Kolchinskii Pollard entropy Even norms themselves were in some situations replaced by measurable majorants to which the well developed separable theory then carried over straightforwardly *Probability in Banach Spaces, 8* R. the limits in the law of the iterated logarithm in Banach spaces   <u>Probability in Banach Spaces 7</u> Eberlein,Külbs,Marcus,2012-12-06 The first international conference on Probability in Banach Spaces was held at Oberwolfach West Germany in 1975 It brought together European researchers who under the inspiration of the Schwartz Seminar in Paris were using probabi listic methods in the study of the geometry of Banach spaces a rather small number of probabilists who were already studying classical limit laws on Banach spaces and a larger number of probabilists specialists in various aspects of the study of Gaussian processes whose results and techniques were of interest to the members of the first two groups This first conference was very fruitful It fos tered a continuing relationship among 50 to 75 probabilists and analysts working on probability on infinite dimensional spaces the geometry of Banach spaces and the use of random methods in harmonic analysis Six more international conferences were held since the 1975 meeting Two of the meetings were held at Tufts University one at S nderborg Denmark and the others at Oberwolfach This volume contains a selection of papers by the partici pants of the Seventh International Conference held at Oberwolfach West Ger many June 26 July 2 1988 This exciting and provocative conference was at tended by more than 50 mathematicians from many countries These papers demonstrate the range of interests of the conference participants In addition to the ongoing study of classical and modern limit theorems in Banach spaces a branching out has occurred among the members of this group   *Probability in Banach Spaces 6* Haagerup,2012-12-06 This volume contains a selection of papers by the participants of the 6 International Conference on Probability in Banach Spaces Sand bjerg Denmark June 16 D1 1986 The conference was attended by 45 participants from several countries One thing makes this conference completely different from the previous five ones namely that it was ar ranged jointly in Probability in Banach spaces and Banach space theory with almost equal representation of scientists in the two fields Though these fields are closely related it seems that direct collaboration between researchers in the two groups has been seldom It is our feeling that the conference where the participants were together for five days taking part in lectures and intense discussions of mutual problems has contributed to a better understanding and closer collaboration in the two fields The papers in the present volume do not cover all the material pre sented in the lectures several results covered have been published else where The sponsors of the conference are The Carlsberg Foundation The Danish Natural Science Research Council The Danish Department of Education The Department of Mathematics Odense University The Department of Mathematics Aarhus University The Knudsen Foundation Odense Odense University The Research Foundation of Aarhus University The Thborg Foundation The participants and the organizers would like to thank these institu tions for their support The Organizers Contents A de Acosta and M Ledoux On the identification of the limits in the law of the iterated logarithm in Banach spaces   *Probability in Banach Spaces* Anatole Beck,2006-11-14   *Probability in Banach Spaces III* A.
