Problem Of Excitability The Electrical Excitability And Ionic Permeability Of The Nerve Membrane:

The Problem of Excitability B. Khodorov, 2012-12-06 The Russian edition of this book appeared in 1969 and immediately gained widespread recognition as a reference work for research workers interested in the physiology biophysics and pharmacology of excitable tissues There are several reasons for the book's success It deals with a key problem in biology which has recently been the subject of very intensive study and it is of great interest to a wide scientific audience Not only the fundamentals of the modern membrane theory of biopotentials but also the vast factual material collected in the last decades by the study of the biophysical and pharmacological properties of the ionic permeability pores of the cell membrane are described in the book in an authoritative yet readable form Special attention is paid in the book to the systematic analysis of the consequences of the Hodgkin Huxley mathematical theory of the nervous impulse for the problem of excitability The relationship between the various parameters of excitability threshold potential threshold current useful time accommodation and the action potential on the one hand and the constants of ionic permeability of the nerve fiber membrane on the other hand is subjected to detailed examination in this context To do this the author has made extensive use not only of experimental results obtained on isolated fibers especially single nodes of Ranvier but also the results of his own investigations on mathematical models of excitable membranes Modeling in the Neurosciences R.R.

Poznanski, 2019-01-22 With contributions from more than 40 renowned experts *Modeling in the Neurosciences From Ionic Channels to Neural Networks* is essential for those interested in neuronal modeling and quantitative neuroscience Focusing on new mathematical and computer models techniques and methods this monograph represents a cohesive and comprehensive treatment Electricity and Magnetism in Biology and Medicine Ferdinando Bersani, 2012-12-06 In the last few decades the research on bioelectromagnetics has expanded worldwide About one thousand researchers are now working in the field in a variety of institutions throughout the world including medical biological engineering and technical laboratories and protection agencies After many years of research a clear picture is now emerging Initially the research was mainly interested in the therapeutic applications of ELF electric and magnetic fields and the RF range was mainly taken into consideration with respect to thermal effects only Then the growing body of biological effects of ELF fields on cells and biological tissues particularly for the repair processes in bone have drawn the attention of researchers to non thermal effects ranging from static fields to microwaves A specific field of interest that has been the object of a large debate in the last twenty years has been the potential health risk associated with electric power production and distribution and more recently with domestic and industrial appliances In the last few years the explosion of the market for cellular phones has highlighted the issue of possible health dangers related to their use and to the widespread presence of base stations The first World Congress on Electricity and Magnetism in Biology and Medicine was held in Orlando Florida in 1992 and collected the widest amount of contributions from almost all the major researchers involved in the field **Catalog of Copyright Entries.**
