Integrative Problem-Solving in a Time of Decadence George Christakos, 2010-12-10 Presents a unique study of Integrative Problem Solving IPS The consideration of Decadence is essential in the scientific study of environmental and other problems and their rigorous solution because the broad context within which the problems emerge can affect their solution Stochastic reasoning underlines the conceptual and methodological framework of IPS and its formulation has a mathematical life of its own that accounts for the multidisciplinary of real world problems the multisourced uncertainties characterizing their solution and the different thinking modes of the people involved Only by interpolating between the full range of disciplines including stochastic mathematics physical science neuropsychology philosophy and sociology and the associated thinking modes can scientists arrive at a satisfactory account of problem solving and be able to distinguish between a technically complete problem solution and a solution that has social impact
