Probleme A Ncorps:

Poincare and the Three Body Problem June Barrow-Green, 1997 Poincare's famous memoir on the three body problem arose from his entry in the competition celebrating the 60th birthday of King Oscar of Sweden and Norway His essay won the prize and was set up in print as a paper in *Acta Mathematica* when it was found to contain a deep and critical error In correcting this error Poincare discovered mathematical chaos as is now clear from June Barrow Green's pioneering study of a copy of the original memoir annotated by Poincare himself recently discovered in the Institut Mittag Leffler in Stockholm *Poincare and the Three Body Problem* opens with a discussion of the development of the three body problem itself and Poincare's related earlier work The book also contains intriguing insights into the contemporary European mathematical community revealed by the workings of the competition After an account of the discovery of the error and a detailed comparative study of both the original memoir and its rewritten version the book concludes with an account of the final memoir's reception influence and impact and an examination of Poincare's subsequent highly influential work in celestial mechanics

Theory of Orbits, the Restricted Problem of Three Bodies Victor G. Szebehely, 1967 Description del editor *Theory of Orbits The Restricted Problem of Three Bodies* is a 10 chapter text that covers the significance of the restricted problem of three bodies in analytical dynamics celestial mechanics and space dynamics The introductory part looks into the use of three essentially different approaches to dynamics namely the qualitative the quantitative and the formalistic The opening chapters consider the formulation of equations of motion in inertial and in rotating coordinate systems as well as the reductions of the problem of three bodies and the corresponding streamline analogies These topics are followed by discussions on the regularization and writing of equations of motion in a singularity free systems the principal qualitative aspect of the restricted problem of the curves of zero velocity and the motion and nonlinear stability in the neighborhood of libration points This text further explores the principles of Hamiltonian dynamics and its application to the restricted problem in the extended phase space A chapter treats the problem of two bodies in a rotating coordinate system and treats periodic orbits in the restricted problem Another chapter focuses on the comparison of the lunar and interplanetary orbits in the Soviet and American literature The concluding chapter is devoted to modifications of the restricted problem such as the elliptic three dimensional and Hill's problem This book is an invaluable source for astronomers engineers and mathematicians Academic Press

Mortal Subjects Christina Howells, 2013-05-02 This wide ranging and challenging book explores the relationship between subjectivity and mortality as it is understood by a number of twentieth century French philosophers including Sartre Lacan Levinas and Derrida Making intricate and sometimes unexpected connections Christina Howells draws together the work of prominent thinkers from the fields of phenomenology

and existentialism religious thought psychoanalysis and deconstruction focussing in particular on the relations between body and soul love and death desire and passion From Aristotle through to contemporary analytic philosophy and neuroscience the relationship between mind and body psyche and soma consciousness and brain has been persistently recalcitrant to analysis and emotion or passion is the locus where the explanatory gap is most keenly identified This problematic forms the broad backdrop to the work s primary focus on contemporary French philosophy and its attempts to understand the intimate relationship between subjectivity and mortality in the light not only of the death of the classical subject but also of the very real frailty of the subject as it lives on finite desiring embodied open to alterity and always incomplete Ultimately Howells identifies this vulnerability and finitude as the paradoxical strength of the mortal subject and as what permits its transcendence Subtle beautifully written and cogently argued this book will be invaluable for students and scholars interested in contemporary theories of subjectivity as well as for readers intrigued by the perennial connections between love and death
