

PROCEDURAL KNOWLEDGE

Procedural knowledge "consists of 'knowing how' to do something, that is, skills to construct, connect and use declarative knowledge" (Miltiadis & Naeve, 2006. p. 57).

DEFINITION

Procedural knowledge refers to the procedures, processes, and skills required to perform a task or activity. It involves executing actions or steps in a particular sequence to achieve a desired outcome or goal.

EXAMPLE

- **Tying shoelaces:** This involves performing specific movements with the fingers and hands that are acquired through practice and repetition.
- **Riding a bicycle:** People learn how to balance, steer, and pedal through practice and experience.

Applied Cognitive Task Analysis in Aviation Thomas L. Seamster, Richard E. Redding, 2017-03-02 Due to the requirements of automatic system design and new needs for the training of complex tasks Cognitive Task Analysis CTA has been used with increasing frequency in recent years by the airline industry and air traffic control community Its power is reflected in the literature on professional training and systems design where CTA is often cited as one of the most promising new technologies especially for the complex cognitive tasks now confronting those working in aviation The objective of this book is to bridge the gap between research and practice to make what we know about CTA available to practitioners in the field The book focuses on cognitive psychology and artificial intelligence analyses of aviation tasks It is designed to help readers identify and solve specific design and training problems in the flight deck air traffic control and operations contexts Distilling experience and guidelines from the best aviation cognitive analyses in accessible form it is the first comprehensive volume on CTA and is written for practitioners of cognitive analysis in aviation It provides an overview of analyses to date methods of data collection and recommendations for designing and conducting CTA for use in instructional design systems development and evaluation The first part of the book provides the principles and foundations of CTA describing traditional approaches to task analysis and ways that cognitive analyses can be integrated with the analysis and development processes The next part details how to select the appropriate method or methods determine job tasks that can be trained for automatic performance extract knowledge structures analyse mental models and identify the decision making and problem solving strategies associated with experienced job performance The authors also describe when to use and how to design and conduct a cognitive task analysis how to use CTA along with traditional task analysis and ISD and how to use CTA in training program development and systems design as well as in personnel selection and evaluation The current demand for cognitive analyses makes this a timely volume for those in aviation and more generally the industrial development and training communities Readers will find this a thorough presentation of cognitive analyses in aviation and a highly usable guide in the design implementation and interpretation of CTA The book will be useful to instructional developers aviation equipment and systems designers researchers government regulatory personnel human resource managers instructors pilots air traffic controllers and operations staff

Driver Training for Automated Vehicles Siobhán E. Merriman, Katherine L. Plant, Kirsten M. A. Revell, Neville A. Stanton, 2024-04-30 Since the introduction of Automated Vehicles AVs on roads there have been a number of high profile collisions which have highlighted significant driver challenges These include challenges associated with drivers trust in the automation their knowledge and awareness of the AV s capabilities and limitations and their reduced situation awareness of the road environment and the vehicle Solutions are needed to overcome these challenges so that the expected benefits of AVs can be realised Driver Training for Automated Vehicles A Systems Approach identifies the training requirements for drivers of AVs and takes a systematic approach to design develop implement and evaluate a comprehensive

training package to address these requirements This book explores how training can overcome the driver challenges associated with AVs by improving drivers mental models trust in automation decisions and behaviour when activating a Level 4 AV It presents a systematic approach to the training lifecycle by first presenting the current state of research into AVs identifying the challenges and training requirements for drivers of AVs and then developing and evaluating a training programme to achieve these requirements This fascinating title highlights the need for drivers to undergo training for AVs and takes us a step closer to this need It walks readers through a systematic four step process and provides practical guidance to develop and evaluate an effective training programme The reader will develop a thorough understanding of the current driver challenges with AVs and the methods and systems to mitigate them through current knowledge and research This book is an ideal read for practitioners designers and academics with a professional or research interest in AVs Its appeal extends to those in the fields of automotive design Systems Engineering Human Factors and education and training
