Proceedings of the SIGPLAN Symposium on Compiler Construction Symposium on Compiler Construction, 1982

Engineering a Compiler Keith D. Cooper, Linda Torczon, 2011-01-18 This entirely revised second edition of *Engineering a Compiler* is full of technical updates and new material covering the latest developments in compiler technology. In this comprehensive text you will learn important techniques for constructing a modern compiler. Leading educators and researchers Keith Cooper and Linda Torczon combine basic principles with pragmatic insights from their experience building state of the art compilers. They will help you fully understand important techniques such as compilation of imperative and object oriented languages, construction of static single assignment forms, instruction scheduling and graph coloring register allocation. In depth treatment of algorithms and techniques used in the front end of a modern compiler. Focus on code optimization and code generation, the primary areas of recent research and development. Improvements in presentation including conceptual overviews for each chapter, summaries and review questions for sections and prominent placement of definitions for new terms. Examples drawn from several different programming languages. *Essentials of Compilation* Jeremy G. Siek, 2023-02-21 A hands on approach to understanding and building compilers. Compilers are notoriously some of the most difficult programs to teach and understand. Most books about compilers dedicate one chapter to each progressive stage, a structure that hides how language features motivate design choices. By contrast, this innovative textbook provides an incremental approach that allows students to write every single line of code themselves. *Essentials of Compilation* guides the reader in constructing their own compiler for a small but powerful programming language, adding complex language features as the book progresses. Jeremy Siek explains the essential concepts, algorithms and data structures that underlie modern compilers and lays the groundwork for future study of advanced topics. Already in wide use by students and professionals alike, this rigorous but accessible book invites readers to learn by doing. Deconstructs the challenge of compiler construction into bite sized pieces. Enhances learning by connecting language features to compiler design choices. Develops understanding of how programs are mapped onto computer hardware. Learn by doing approach suitable for students and professionals. Proven in the classroom. Extensive ancillary resources include source code and solutions. *A Practical Introduction to Denotational Semantics* Lloyd Allison, 1986 Basics, Notation, Lattices, A simple language, Direct semantics, Control Data structures and data types, A prolog semantics, Miscellaneous. *Languages, Compilers, Analysis - From Beautiful Theory to Useful Practice* Dominic Orchard, Tomas Petricek, Jeremy Singer, 2025-11-24 This Festschrift is dedicated to Alan Mycroft who formally retired from the University of Cambridge after almost 40 years. Following a BA in Mathematics from the University of Cambridge in 1977, Alan took the Diploma in Computer Science in 1978. He then completed a PhD in Edinburgh in 1981 on *Abstract Interpretation and Optimising Transformations for Applicative Programs* under the supervision of Rod Burstall and Robin Milner. After an EPSRC postdoctoral fellowship at Edinburgh and a research assistant position at Chalmers University

he returned to the University of Cambridge in 1984 and remained there until his retirement in 2023 Alan is well known for pioneering contributions to programming language theory and applications covering both design and implementation His work ranges from compilation and optimisation techniques through semantics static analysis and type systems to parallel concurrent and dataflow programming He co created the Norcroft C compiler with Arthur Norman he co authored the book *Java 8 in Action Lambdas Streams and Functional Style Programming* and he co founded the Raspberry Pi Foundation a hugely successful initiative to develop programming skills and thinking for all ages In addition to his excellent research profile Alan has been an inspiring teacher mentor and collaborator always generous with encouragement and feedback The impact and scope of his career is reflected in the breadth of topics in this volume a fitting tribute to him
