Proceedings Of The Workshop On Motion Of Non Rigid And Articulated Objects 1994:

Proceedings of the 1994 IEEE Workshop on Motion of Non-Rigid and Articulated Objects, November 11-12, 1994, Austin, Texas ,1994 *Multimedia — Informationssysteme zwischen Bild und Sprache* ,2013-07-02 Dieses Buch gibt einen interdisziplinären Überblick über Forschungsergebnisse, Entwicklungen und Erfahrungen mit dem Medieneinsatz in der Lehre und der Forschung an der Universität Regensburg Proceedings ,1995 **Motion-Based Recognition** Mubarak Shah, Ramesh Jain, 2013-03-09 Motion based recognition deals with the recognition of an object and or its motion based on motion in a series of images. In this approach a sequence containing a large number of frames is used to extract motion information. The advantage is that a longer sequence leads to recognition of higher level motions like walking or running which consist of a complex and coordinated series of events. Unlike much previous research in motion this approach does not require explicit reconstruction of shape from the images prior to recognition. This book provides the state of the art in this rapidly developing discipline. It consists of a collection of invited chapters by leading researchers in the world covering various aspects of motion based recognition including lipreading, gesture recognition, facial expression recognition, gait analysis, cyclic motion detection and activity recognition. Audience: This volume will be of interest to researchers and post graduate students whose work involves computer vision, robotics and image processing. **Robotics Research** Georges Giralt, Gerhard Hirzinger, 2012-12-06 This publication covers all the topics which are relevant to Advanced Robotics today ranging from Systems Design to Reasoning and Planning. It is based on the Seventh International Symposium on Robotics Research held in Germany on October 21-24th 1995. The papers were written by specialists in the field from the United States, Europe, Japan, Australia and Canada. The editors who also chaired this symposium present the latest research results as well as new approaches to long standing problems. Robotics Research is a contribution to the emerging concepts, methods and tools that shape Robotics. The papers range from pure research reports to application oriented studies. The topics covered include manipulation, control, virtual reality, motion planning, 3D vision and industrial systems issues.
