Proceedings Of The Conference On Finite Groups:

Proceedings of the Conference on Finite Groups William R. Scott, Fletcher Gross, 2014-05-10 Proceedings of the Conference on Finite Groups provides information pertinent to the fundamental aspects of finite group theory This book presents the problem of characterizing simple groups in terms of the local structure of a group Organized into five parts encompassing 43 chapters this book begins with an overview of the characterization of the Chevalley groups over fields of odd order and indicates the role of this characterization in the theory of component type groups This text then examines the structure as well as the representations of specific simple groups Other chapters consider the general theory of representations and characters of finite groups This book discusses as well permutation groups and the connection between group theory and geometry The final chapter deals with finite solvable groups as well as the theory of formations This book is a valuable resource for mathematicians graduate students and research workers

Finite Groups 2003 Chat Yin Ho, Peter Sin, Pham Huu Tiep, Alexandre Turull, 2008-08-22 This is a volume of research articles related to finite groups Topics covered include the classification of finite simple groups the theory of p groups cohomology of groups representation theory and the theory of buildings and geometries As well as more than twenty original papers on the latest developments which will be of great interest to specialists the volume contains several expository articles from which students and non experts can learn about the present state of knowledge and promising directions for further research The Finite Groups 2003 conference was held in honor of John Thompson The profound influence of his fundamental contributions is clearly visible in this collection of papers dedicated to him

Michler, Ringel, 2012-12-06 From April 1 1984 until March 31 1991 the Deutsche Forschungsgemeinschaft has sponsored the project Representation Theory of Finite Groups and Finite Dimensional Algebras The proposal for this project was submitted by B Huppert Mainz B Fischer Bielefeld G Michler Essen H Pahlings Aachen and C M Ringel Bielefeld in order to strengthen the interaction between the different research areas in representation theory The Deutsche Forschungsgemeinschaft has given many research positions and fellowships for young algebraists enabling them to do research at their own universities or as visitors at well known research institutions in America Australia England and France The whole project benefitted very much from an extensive exchange programme between German and American scientists sponsored by the Deutsche Forschungsgemeinschaft and by the National Science Foundation of the United States This volume presents lectures given in a final conference and reports by members of the project It is divided into two parts The first part contains seven survey

articles describing recent advances in different areas of representation theory These articles do not only concentrate on the work done by the German research groups but also inform on major developments of the subject at all The volume omits those topics already treated in book form In particular it does not contain a survey on K

Finite Reductive Groups: Related Structures and Representations Marc Cabanes, 2012-12-06 Finite reductive groups and their representations lie at the heart of group theory This volume treats linear representations of finite reductive groups and their modular aspects together with Hecke algebras complex reflection groups quantum groups arithmetic groups Lie groups symmetric groups and general finite groups

Use of Mathematical Literature A.R. Dorling, 2014-05-20 Use of Mathematical Literature discusses the bibliographic concerns of mathematical literature The book is comprised of 14 chapters that cover characteristics of mathematical literature and provide reviews of some of the major literature in various mathematical fields The text first discusses the role of the literature in mathematics and then proceeds to tackling major organizations journals and reference materials Next the book provides critical accounts of the major literature in various mathematical fields such as combinatorics topology and mathematical programming The book will be of great use to students practitioners and researchers of mathematics Other profession handling math literature such as teachers librarians and translators will also find this book invaluable

The Argument of Mathematics Andrew Aberdein, Ian J Dove, 2013-07-01 Written by experts in the field this volume presents a comprehensive investigation into the relationship between argumentation theory and the philosophy of mathematical practice Argumentation theory studies reasoning and argument and especially those aspects not addressed or not addressed well by formal deduction The philosophy of mathematical practice diverges from mainstream philosophy of mathematics in the emphasis it places on what the majority of working mathematicians actually do rather than on mathematical foundations The book begins by first challenging the assumption that there is no role for informal logic in mathematics Next it details the usefulness of argumentation theory in the understanding of mathematical practice offering an impressively diverse set of examples covering the history of mathematics mathematics education and perhaps surprisingly formal proof verification From there the book demonstrates that mathematics also offers a valuable testbed for argumentation theory Coverage concludes by defending attention to

mathematical argumentation as the basis for new perspectives on the philosophy of mathematics *The Selected Works of J. Frank Adams: Volume 2* J. Frank Adams, 1992-10-07 The selected works of one the greatest names in algebraic topology

Finite Groups William R. Scott, Fletcher Gross, 1976 Finite Groups--coming of Age John McKay, 1985 These conference papers should dispel any post classification pessimism about the future of the theory of finite simple groups Having noted that the theory developed for the classification touches on so few other branches of mathematics the editor focuses on research in finite simple groups not central to the classification and presents a broad context for the recent results in the field The papers are aimed at researchers and graduate students in algebra They pay special attention to current research in sporadic geometry the Fischer Griess Monster group and moonshine Though all the papers are of high research value the following papers of unusual significance should be singled out Frenkel Lepowsky and Meurman's construction of the Monster group F_1 Conway and Queen's computation of characters of E_8 Norton's proof of the uniqueness of the Monster and Mason's exploration of moonshine **Gesamtverzeichnis der Kongress-Schriften in Bibliotheken der Bundesrepublik Deutschland einschliesslich Berlin (West): Registerband** Staatsbibliothek Preussischer Kulturbesitz.
