We reuse these data in all the subsequent chapters which we keep as self contained as possible. The empirical applications range from key concepts of empirical asset pricing beta estimation portfolio sorts performance analysis Fama French factors to modeling and machine learning applications fixed effects estimation clustering standard errors difference in difference estimators ridge regression Lasso Elastic net random forests neural networks and portfolio optimization techniques. Key Features. Self contained chapters on the most important applications and methodologies in finance which can easily be used for the reader's research or as a reference for courses on empirical finance. Each chapter is reproducible in the sense that the reader can replicate every single figure table or number by simply copying and pasting the code we provide. A full fledged introduction to machine learning with scikit learn based on tidy principles to show how factor selection and option pricing can benefit from Machine Learning methods. We show how to retrieve and prepare the most important datasets financial economics CRSP and Compustat including detailed explanations of the most relevant data characteristics. Each chapter provides exercises based on established lectures and classes which are designed to help

students to dig deeper The exercises can be used for self studying or as a source of inspiration for teaching exercises
