Pollock, Ruth E. Van Reken, Michael V. Pollock, 2010-11-26 For more than a decade Third Culture Kids has been the authority on TCKs children of expatriates missionaries military personnel and others who live and work abroad With a significant part of their developmental years spent outside of their passport country TCKs create their own unique third cultures Authors Pollock and Van Reken pioneered the TCK profile which brought to light the emotional and psychological realities that come with the TCK journey often resulting in feelings of rootlessness and grief but also an increased confidence and ability to interact with many cultures Through interviews and personal writings this new expanded edition explores the challenges and benefits that TCKs encounter and also widens the net to discuss the experiences of CCKs cross cultural kids who are immigrants international adoptees or the children of biracial or bicultural parents Highlighting dramatic changes brought about by instant communication and ever evolving mobility patterns Third Culture Kids reveals the hidden diversity in our world and challenges traditional notions of identity and home and shows us how the TCK experience is becoming increasingly common and valuable *AN INTRODUCTION TO DEEP LEARNING* Vibhor Kumar Vishnoi, Dr. Nupa Ram Chauhan, Dr. Krishan Kumar, 2024-03-28 In deep learning an artificial neural network ANN stores and processes large amounts of data This is because artificial neural networks are used in deep learning It is able to find both overt and covert connections across datasets When working with deep learning direct programming is not always necessary Recent years have seen a meteoric rise in its popularity as a result of developments in processing power and the availability of massive datasets This is one of the reasons why For the reason that it was created using artificial designed to learn from large datasets Deep Learning is a subfield of Machine Learning that use neural networks for modeling and problem solving its development was spurred by the

need to address complex problems In order to train these networks to deal with challenging problems the appropriate models must first be solved Neural networks which imitate the brain in structure and operation process and transform data These tasks are handled by multi layer neural networks consisting of numerous nodes communicating with one another Fundamental to the idea which are defined by the existence of several layers of connected nodes It is from this idea that the term deep neural network was coined Because these networks can spot hierarchical patterns and features in the data it is possible that they can develop elaborate representations of the data If deep learning algorithms could independently learn and develop themselves depending on the data they were presented then human engineers might not be needed to manually construct features Deep learning has been very effective in several fields These fields include picture identification natural language processing voice recognition and recommendation systems When training deep neural networks it is generally necessary to have access to vast volumes of data and have a fast processing speed Training deep neural networks on the other hand has become a great deal less complicated in recent years because to the proliferation of cloud computing and specialized equipment such as Graphics Processing Units GPUs
