Foundations of Antenna Theory and Techniques Vincent F. Fusco, 2005 As a result of recent growth of the wireless market research and development in antenna technology is growing at a fast pace New emerging technologies include antennas for cellular mobile communications vehicle mounted antennas and those for mobile satellite communications This text is intended to introduce new engineers and undergraduates to the topic of antennas It is a well paced low level introduction to the subject that does not require previous knowledge of electromagnetic theory In addition the step by step approach to maths is ideal for those who do not have a good mathematical background It provides a good introduction to the subject without being overly detailed and includes some non core subjects to give the student a good overview of techniques

Small Antenna Handbook Robert C. Hansen, Robert E. Collin, 2011-08-26 Now in a completely revised updated and enlarged Second Edition Small Antennas in Portable Devices reviews recent significant theoretical and practical developments in the electrically small antenna area Examining antenna designs that work as well as those that have limitations this new edition

provides practicing engineers and upper level and graduate students with new information on work on improving bandwidth using spherical helix dipoles work on electromagnetically coupled structures exact derivation of the Q for electrically small antennas for both the TE and TM modes and a new simplified Q formula *Antenna Handbook* Y.T. Lo, S. W. Lee, 2013-06-29

Techniques based on the method of modal expansions the Rayleigh Stevenson expansion in inverse powers of the wavelength and also the method of moments solution of integral equations are essentially restricted to the analysis of electromagnetic radiating structures which are small in terms of the wavelength It therefore becomes necessary to employ approximations based on high frequency techniques for performing an efficient analysis of electromagnetic radiating systems that are large in terms of the wavelength One of the most versatile and useful high frequency techniques is the geometrical theory of diffraction GTD which was developed around 1951 by J B Keller 1 2 3 A class of diffracted rays are introduced systematically in the GTD via a generalization of the concepts of classical geometrical optics GO According to the GTD these diffracted rays exist in addition to the usual incident reflected and transmitted rays of GO The diffracted rays in the GTD originate from certain localized regions on the surface of a radiating structure such as at discontinuities in the geometrical and electrical properties of a surface and at points of grazing incidence on a smooth convex surface as illustrated in Fig 1 In particular the diffracted rays can enter into the GO shadow as well as the lit regions Consequently the diffracted rays entirely account for the fields in the shadow region where the GO rays cannot exist **Amateur Radio Antenna Handbook** Harry D.
