Reports provide systematic and detailed review coverage of progress in the major areas of chemical research. Written by experts in their specialist fields, the series creates a unique service for the active research chemist, supplying regular critical in-depth accounts of progress in particular areas of chemistry. For over 80 years, the Royal Society of Chemistry and its predecessor, the Chemical Society, have been publishing reports charting developments in chemistry, which originally took the form of Annual Reports. However, by 1967, the whole spectrum of chemistry could no longer be contained within one volume, and the series Specialist Periodical Reports was born. The Annual Reports themselves still existed but were divided into two, and subsequently three volumes covering Inorganic, Organic, and Physical Chemistry. For more general coverage of the highlights in chemistry, they remain a must. Since that time, the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry. Some titles have remained unchanged, while others have altered their emphasis along with their titles; some have been combined under a new name, whereas others have had to be discontinued. *Journal of the Society of Arts*, 1885 **The Principles and Practice of Photography Familiarly Explained ...** C. Jabez Hughes, 1876

The British Journal of Photography, 1875 *Practical Emulsion* H. Bennett, Max Fred Wulfinhoff, Jack L. Bishops, 1968
Physics and Chemistry of Interfaces Hans-Jürgen Butt, Karlheinz Graf, Michael Kappl, 2003-11-07. Serving as a general introduction to surface and interface science, this book focuses on essential concepts rather than specific details, on intuitive understanding rather than learning facts. The text reflects the fact that the physics and chemistry of surfaces is a diverse field of research and shows this in its interdisciplinary conceptual design. Once the most important techniques and methods have been introduced, readers will be able to apply simple models to their own scientific problems. Furthermore, manifold high-end technological applications from surface technology, biotechnology, or microelectronics illustrate the basic scientific treatment. The authors address advanced students of chemistry, physics, materials science, chemical engineering, and related subjects with a basic knowledge of natural sciences and mathematics, since the mathematical calculations are thoroughly explained and made comprehensible for the reader. As such, non-specialists in surface science who want to learn more about this important subject will also benefit from the book. *The Science of Sugar Confectionery* W. P. Edwards, 2000. Confectionery is a topic close to many people's hearts, and its manufacture involves some interesting science. The confectionery industry is divided into three classes: chocolate, flour, and sugar confectionery. It is the background science of this latter category that is covered in *The Science of Sugar Confectionery*. The manufacture of confectionery is not a science-based industry, as these products have traditionally been created by skilled confectioners working empirically. In fact, scientific understanding of the production process has only been acquired retroactively. Historically, however, sugar confectionery has had technological synergies with the pharmaceutical industry, such as making sugar tablets and applying panned sugar coatings. This book gives an introduction to the subject with some basic definitions and commonly used ingredients, and then moves on to discuss the chemistry of various types of sugar confectionery. These include sugar glasses, boiled sweets, grained sugar products, fondants,

toffees and fudges hydrocolloids gums pastilles and jellies and concludes with a chapter dedicated to sugar free confectionery **Pacific Medical and Surgical Journal** ,1895
