Ecosystem Models of Chesapeake Bay, 1994-1996, 1997 **Nutrient Dynamics and Biological Structure in Shallow Freshwater and Brackish Lakes** E. Mortensen, E. Jeppesen, M Søndergaard, L. Kamp Nielsen, 2013-03-09 The nutrient dynamics and biological structure of shallow non stratified lakes differ markedly from that of deep and stratified lakes for example the return of nutrients lost through sedimentation is faster and the potential importance of fish and submerged macrophytes as food web regulators is greater In addition shallow lakes are more easily influenced by fluctuations in the physical environment caused by wind disturbance temperature change etc Although shallow lakes are often the most common lake type in lowland countries less attention has been paid to them than to deep stratified lakes and few comparisons have been made between shallow freshwater and brackish lakes The volume is divided into five main themes each introduced by an invited speaker Nutrient dynamics with special emphasis on sediment water interactions and changes in loading Professor Lambertus Lyklema Biological structure and trophic interaction Professor Stephen T Threlkeld Submerged macrophytes dynamics and role in the lake ecosystems Ass Professor Kaj Sand Jensen Comparison of freshwater and brackish lake ecosystems Professor Brian Moss Modelling the impact of nutrients the biological structure and the recovery process Dr Marten Scheffer Community Models for Wildlife Impact Assessment Richard L. Fundamentals of Ecological Modelling S.E. Jorgensen, 2011-01-10 *Fundamentals of Ecological Modelling Applications in Environmental Management and Research* Fourth Edition provides a comprehensive discussion of the fundamental principles of ecological modeling The first two editions of this book published in 1986 and 1994 focused on the roots of the discipline the four main model types that dominated the field 30 40 years ago 1 dynamic biogeochemical models 2 population dynamic models 3 ecotoxicological models and 4 steady state biogeochemical and energy models The third edition focused on the mathematical formulations of ecological processes that are included in ecological models This fourth edition uses the four model types previously listed as the foundation and expands the latest model developments in spatial models structural dynamic models and individual based models As these seven types of models are very different and require different considerations in the model development phase a separate chapter is devoted to the development of each of the model types Throughout the text the examples given from the literature emphasize the application of models for environmental management and research Presents the most commonly used model types with a step by step outline of the modeling procedure used for each Shows readers through an illustrated example of how to use each model in research and management settings New edition is revised to include only essential theory with a focus on applications Includes case studies illustrations and exercises case study of an ecological problem with full illustration on how to solve the problem
