The IoT Hacker's Handbook Aditya Gupta, 2019-03-30 Take a practitioner's approach in analyzing the Internet of Things IoT devices and the security issues facing an IoT architecture You'll review the architecture's central components from hardware communication interfaces such as UART and SPI to radio protocols such as BLE or ZigBee You'll also learn to assess a device physically by opening it looking at the PCB and identifying the chipsets and interfaces You'll then use that information to gain entry to the device or to perform other actions such as dumping encryption keys and firmware As the IoT rises to one of the most popular tech trends manufacturers need to take necessary steps to secure devices and protect them from attackers The IoT Hacker's Handbook breaks down the Internet of Things exploits it and reveals how these devices can be built securely What You'll Learn Perform a threat model of a real world IoT device and locate all possible attacker entry points Use reverse engineering of firmware binaries to identify security issues Analyze, assess and identify security issues in exploited ARM and MIPS based binaries Sniff capture and exploit radio communication protocols such as Bluetooth Low Energy BLE and ZigBee Who This Book is For Those interested in learning about IoT security such as pentesters working in different domains embedded device developers or IT people wanting to move to an Internet of Things security role

Catalogue Montgomery Ward, 1941 The business model cycle Sophia von Berg, 2020-12-17 Today firms all over the world have to deal with dynamic business environments Fast moving digitalization has made information more transparent strengthening the role of the customer At the same time the provider can have a much closer relationship with the user thanks to real time communication However corporate practice does not have a process for developing dynamic business models and user centric business models that can be designed and changed using smart technologies have not yet been systematically integrated To stay competitive companies need to rise to this challenge The aim of this dissertation was to develop a dynamic user centric process model for business model design and change and to evaluate the model's ability to maintain a competitive advantage in the mobility sector First the differences between static dynamic and user centric business models and their corresponding attributes were deduced Then these findings were combined into a process model using system dynamics logic This model considers the user a co creator of value and helps managers react to real time changes in their business model environment Finally a mobility sector case study is presented to highlight the relevance of this model to real world application This business model cycle BMC supports the strategic management of dynamic user centric business model design and change activities It describes a step by step procedure of business model design that includes ideation prototyping and integration of business model options Moreover it allows continuous monitoring of the business model environment and adaption of the model accordingly At the same time bidirectional interaction between the user and provider is possible allowing the provider to adapt to their users needs The BMC is unique in that these processes can take place simultaneously Finally the real world case study in the mobility sector confirmed that using the BMC for
