McMahon, 2016 **The pollination of cultivated plants: A compendium for practitioners** Food and Agriculture Organization of the United Nations, 2018-10-15 More than twenty years ago the Food and Agriculture Organization of the United Nations contributed to the growing recognition of the role of pollination in agricultural production with the publication of *The Pollination of Cultivated Plants in the Tropics* Since that time the appreciation of pollinators has grown alongside the realization that we stand to lose them But our knowledge and understanding of crop pollination pollinator biology and best management practices has also expanded over this time This volume is the first of two compendiums for practitioners sharing expert knowledge on all dimensions of crop pollination in both temperate and tropical zones The focus in this first volume is on applied crop and system specific pollination

Encyclopedia of Cultivated Plants Christopher Cumo, 2013-04-25 Readers of this expansive three volume encyclopedia

will gain scientific sociological and demographic insight into the complex relationship between plants and humans across history. Comprising three volumes and approximately half a million words, this work is likely the most comprehensive reference of its kind, providing detailed information not only about specific plants and food crops such as barley, corn, potato, rice, and wheat, but also interdisciplinary content that draws on the natural sciences, social sciences, and humanities. The entries underscore the fascination that humans have long held for plants, identifies the myriad reasons why much of life on earth would be impossible without plants, and points out the intertwined relationship of plants and humans and how delicate this balance can be. While the majority of the content is dedicated to the food plants that are essential to human existence, material on ornamentals, fiber crops, pharmacological plants, and carnivorous plants is also included.

Walford's Guide to Reference Material: Science and technology Albert John Walford, 1993. Cette bibliographie commentée touche tous les domaines du savoir humain, soit de l'Art à la Zoologie; elle signale les ouvrages les plus importants, soit des bibliographies, des index, des encyclopédies, des dictionnaires, des guides, des revues, etc., dont le support d'information est soit du papier, soit un CD-ROM, soit une base de données en ligne, directe, soit un microforme, etc. L'objectif du guide Walford est de devenir la source d'information sur tout type de référence, nonobstant le support technique.

Principles of Field Crop Production J. E. Pratley, 2003. Commercial crop production in the 21st century is a highly technical pursuit. There is an economic imperative for farmers to make a reasonable living through increased productivity, cost containment, and market satisfaction. Contending with the variability of the Australian climate remains a major challenge. Of increasing importance is the environmental imperative: the need to manage soil structure, decline, erosion, acidity, and salinity. Involved also are biodiversity preservation and the water reform agenda. The fourth edition of *Principles of Field Crop Production* addresses these issues and provides a

contemporary understanding involved in the production of crops in Australia The book provides background on the evolution of farming systems A new chapter on climate variability and its predictability is included as are new treatments of rotations weeds pests and diseases An introduction to supply chain management provides the reader with an understanding of market forces All chapters have been updated and the principles clearly defined **OARDC Faculty Publications** Ohio

Agricultural Research and Development Center,2001 **Recent Advances on Nitrogen Use Efficiency in Crop Plants and Climatic Challenges** Hamada AbdElgawad,2023-08-25 Nitrogen N is a mineral nutrient that is essential for the normal growth and development of plants that is required in the highest quantity It is an element of nucleic acids proteins and photosynthetic metabolites therefore crucial for crop growth and metabolic processes Recently it was estimated that N fertilizers could meet the 48% demand of the world s population However overuse and misuse of N fertilizers raised environmental concerns associated with N losses by nitrous oxide N₂O emissions ammonia NH₃ volatilization and nitrate NO₃ leaching For instance NH₃ is a pollutant in the atmosphere N₂O is a greenhouse gas that has a warming potential 298 times higher than CO₂ and contributes to ozone depletion and NO₃ causes eutrophication of water bodies Agricultural practices account for about 90% of NH₃ and 70% of N₂O anthropogenic emissions worldwide The efficient use of N chemical fertilizers can be attained through cultural and agronomic practices Nitrogen use efficiency NUE is an important trait that has been studied for decades in different crops The grain production or economic return from the per unit supply of N fertilizer simply explained the NUE Several definitions were suggested by different researchers NUE can be defined as the product of N uptake efficiency NUpE and N utilization efficiency NUtE An increase in NUE increases the yield biomass quality and quantity of crops N is generally applied as chemical fertilizer to the soil whereas a small amount is added to some crops like grain legumes through the fixation process On the other hand crop plants take N through the root system in the form of nitrate or ammonium which is thereby used in different metabolic processes A number of studies have been conducted to increase the NUE in different crops and it has been indicated that NUE can be improved by agronomic physiological biochemical breeding as well as molecular approaches Nitrogen is the main limiting nutrient after carbon hydrogen and oxygen for the photosynthetic process phyto hormonal and proteomic changes and the growth development of plants to complete their lifecycle Excessive and inefficient use of N fertilizer results in enhanced crop production costs and atmospheric pollution Atmospheric nitrogen 71% in the molecular form is not available for the plants For the world s sustainable food production and atmospheric benefits there is an urgent need to upgrade nitrogen use efficiency in the agricultural farming system Nitrogen losses are too high due to excess amount low plant population poor application methods etc which can go up to 70% of total available nitrogen These losses can be minimized up to 15 30% by adopting improved agronomic approaches such as optimal dosage of nitrogen application of N by using canopy sensors maintaining plant population drip fertigation and legume based intercropping Therefore the major concern of modern days is to save

economic resources without sacrificing farm yield as well as the safety of the global environment i.e greenhouse gas emissions ammonium volatilization and nitrate leaching Seed to Civilization Charles Bixler Heiser, 1990 Eating is the second favorite activity of many people and for some it is the first This lively book recounts the intriguing story of the plants and animals that stand between humans and starvation In narrating his tale the author traces the intricate patterns of food use and distribution that have developed since prehistoric times This book is a must reading for anyone interested in the problem of feeding the world's teeming millions over the next half century **Bibliography of Agriculture** ,1970
