Plasma Physics And Nuclear Fusion Research:

Plasma Physics and Fusion Energy Jeffrey P. Freidberg, 2008-07-10 There has been an increase in interest worldwide in fusion research over the last decade and a half due to the recognition that a large number of new environmentally attractive sustainable energy sources will be needed to meet ever increasing demand for electrical energy Based on a series of course notes from graduate courses in plasma physics and fusion energy at MIT the text begins with an overview of world energy needs current methods of energy generation and the potential role that fusion may play in the future It covers energy issues such as the production of fusion power power balance the design of a simple fusion reactor and the basic plasma physics issues faced by the developers of fusion power This book is suitable for graduate students and researchers working in applied physics and nuclear engineering A large number of problems accumulated over two decades of teaching are included to aid understanding

Plasma Physics for Nuclear Fusion Kenrō Miyamoto, 1980 This book focuses on the properties of gaseous plasmas needed to attain controlled fusion reactions Designed as a text for graduated and senior undergraduate students beginning the study of plasma physics as it relates to controlled nuclear fusion the book should play a significant role in preparing a new generation of scientists and engineers to enter the important field of nuclear fusion research It will also serve as a basic and exhaustive reference for professionals already involved in the field The book consists of sixteen chapters grouped into four major subject areas The first five chapters develop the fundamentals of plasma physics and present the conditions of nuclear fusion reactions The next four provide a magnetohydrodynamic description of plasmas followed by four chapters that provide an explanation of wave phenomena and instabilities by means of a kinetic model The three final chapters take up the problems of heating diagnostics and confinement Some of the specific topics introduced are the Lawson condition Boltzmann and Vlasov equations plasma equilibrium magnetohydrodynamic instabilities waves in cold and hot plasmas microinstabilities fast neutral beam injection and wave heating diagnostics employing microwaves lasers and energy analyzers Plasma confinement in tokamaks and stellarators multipole fields mirrors and cusps as well as inertial confinement are reviewed References follow each chapter There are four appendixes and an index

Plasma Physics and Nuclear Fusion Research Richard D. Gill, 2013-09-03 *Plasma Physics and Nuclear Fusion Research* covers the theoretical and experimental aspects of plasma physics and nuclear fusion The book starts by providing an overview and survey of plasma physics the theory of the electrodynamics of deformable media and magnetohydrodynamics and the particle orbit theory The text also describes the plasma waves the kinetic theory the transport theory and the MHD stability theory Advanced theories such as microinstabilities plasma turbulence anomalous transport theory and nonlinear laser plasma interaction theory are also considered The book further tackles the pinch and tokamak confinement devices the stellarator confinement devices the mirror devices and the next generation tokamaks The text also encompasses the fusion reactor studies heating and diagnostics Physicists and people involved in the study of plasma physics and nuclear fusion will find the
