Reading Comprehension Vs Sign In

Ellen Lamar Thomas,H. Alan Robinson

Reading Comprehension Vs Sign In:

Reading Comprehension Difficulties Cesare Cornoldi, Jane V. Oakhill, 2013-04-03 Recognizing the characteristics of children with learning disabilities and deciding how to help them is a problem faced by schools all over the world. Although some disorders are fairly easily recognizable e.g. mental retardation or very specific to single components of performance and quite rare e.g. developmental dyscalculia, schools must consider much larger populations of children with learning difficulties who cannot always be readily classified. These children present high level learning difficulties that affect their performance on a variety of school tasks but the underlying problem is often their difficulty in understanding written text. In many instances despite good intellectual abilities and a superficial ability to cope with written texts and to use language appropriately, some children do not seem to grasp the most important elements or cannot find the pieces of information they are looking for. Sometimes these difficulties are not immediately detected by the teacher in the early school years. They may be hidden because the most obvious early indicators of reading progress in the teacher's eyes do not involve comprehension of written texts or because the first texts a child encounters are quite simple and reflect only the difficulty level of the oral messages, sentences, short stories etc. with which the child is already familiar. However, as years go by and texts get more complex, comprehension difficulties will become increasingly apparent and increasingly detrimental to effective school learning. In turn, studying, assimilating new information and many other situations requiring text comprehension from problem solving to reasoning with linguistic contents could be affected. Problems with decoding, dyslexia and language disorders have attracted more interest from researchers than have specific comprehension problems and have occupied more room in specialized journals. Normal reading comprehension has also been a favorite with researchers. However, scarce interest has been paid to subjects who have comprehension difficulties. This book is an attempt to remedy this situation. In so doing, this volume answers the following questions: Does a reading comprehension problem exist in schools? How important and widespread is the problem? Is the problem specific? How can a reading comprehension difficulty be defined and identified? Does the syndrome have a single pattern or can different subtypes be identified? What are the main characteristics associated with a reading comprehension difficulty? When can other well identified problems add to our understanding of reading comprehension difficulties? Which educational strategies are effective in preventing and treating reading comprehension difficulties? What supplementary information can we get from an international perspective?

Signs for Developing Reading
Emil Holmer, 2016-05-23 Reading development is supported by strong language skills, not least in deaf and hard of hearing (DHH) children. The work in the present thesis investigates reading development in DHH children who use sign language attend Regional Special Needs Schools (RSNS) in Sweden and are learning to read. The primary aim of the present work was to investigate whether the reading skills of these children can be improved via computerized sign language based literacy training. Another aim was to investigate concurrent and longitudinal associations between skills in reading sign language and

cognition in this population The results suggest that sign language based literacy training may support development of word reading In addition awareness and manipulation of the sub lexical structure of sign language seem to assist word reading and imitation of familiar signs i e vocabulary may be associated with developing reading comprehension The associations revealed between sign language skills and reading development support the notion that sign language skills provide a foundation for emerging reading skills in DHH signing children In addition the results also suggest that working memory and Theory of Mind ToM are related to reading comprehension in this population Furthermore the results indicate that sign language experience enhances the establishment of representations of manual gestures and that progression in ToM seems to be typical although delayed in RSNS pupils Working memory has a central role in integrating environmental stimuli and language mediated representations and thereby provides a platform for cross modal language processing and multimodal language development En god spr klig f rm ga bidrar till god l sutveckling inte minst hos d va och h rskadade D H barn Studierna som ing r i avhandlingen unders ker l sutveckling hos D H elever som g r p teckenspr kiga specialskolor och som h ller p att l ra sig att l sa Arbetets huvudsakliga syfte var att unders ka om deras l sf rm ga kan f rb ttras via datoriserad teckenspr ksbaserad l str ning Ett annat syfte var att unders ka samtida och longitudinella samband mellan l sf rm ga teckenspr k och cognition i samma population Resultaten indikerar att teckenspr ksbaserad l str ning kan bidra till ordl sningsutveckling Vidare pekar resultaten p att medvetenhet om och manipulation av teckenspr kets sublexikala struktur st ttar l sf rm gan och dessutom att imitation av k nda tecken i e vokabul r var associerat med utvecklingen av barnens l sf rst else Dessa fynd visar att teckenspr kskunskaper kan utg ra en grund f r l sutveckling hos teckenspr kiga D H elever Resultaten indikerade ven att arbetsminne och Theory of Mind ToM r relaterade till l sf rst else i denna grupp Vid sidan av resultaten r rande l sutveckling framkom ocks att teckenspr kserfarenhet leder till starkare etablering av representationer av manuella gester och vidare att barnens mentaliseringsf rm ga Theory of Mind uppvisade en f rv ntad progression om n f rsenad En implikation av detta r att insatser som st ttar utveckling av teckenbaserade representationer och deras anv ndning vid bearbetning av skrivet spr k kan fr mja l sutveckling hos teckenspr kiga D H elever Arbetsminne f resl s genom sin roll i integration mellan inkommande stimuli och spr kmedierade representationer fungera som en plattform f r modalitets verskridande spr kbearbetning och multimodal spr kutveckling

Psychological Development of Deaf Children Marc Marschark, 1993 This book is the first comprehensive examination of the psychological development of deaf children Because the majority of young deaf children especially those with non signing parents are reared in language impoverished environments their social and cognitive development may differ markedly from hearing children The author here details those potential differences giving special attention to how the psychological development of deaf children is affected by their interpersonal communication with parents peers and teachers This careful and balanced consideration of existing evidence and research provides a new psychological perspective on deaf children and deafness while debunking a number of popular notions about the hearing impaired In light of recent findings concerning manual communication parent child interactions and intellectual and academic assessments of hearing impaired children the author has forged an integrated understanding of social language and cognitive development as they are affected by childhood deafness Empirical evaluations of deaf children s intellectual and academic abilities are stressed throughout The *Psychological Development of Deaf Children* will be of great interest to students teachers and researchers studying deafness and how it relates to speech and hearing developmental social and cognitive psychology social work and medicine

The Role of Working Memory and Executive Function in Communication under Adverse Conditions Mary Rudner, Carine Signoret, 2016-06-20 Communication is vital for social participation However communication often takes place under suboptimal conditions This makes communication harder and less reliable leading at worst to social isolation In order to promote participation it is necessary to understand the mechanisms underlying communication in different situations Human communication is often speech based either oral or written but may also involve gesture either accompanying speech or in the form of sign language For communication to be achieved a signal generated by one person has to be perceived by another person attended to comprehended and responded to This process may be hindered by adverse conditions including factors that may be internal to the sender e g incomplete or idiosyncratic language production occur during transmission e g background noise or signal processing or be internal to the receiver e g poor grasp of the language or sensory impairment The extent to which these factors interact to generate adverse conditions may differ across the lifespan Recent work has shown that successful speech communication under adverse conditions is associated with good cognitive capacity including efficient working memory and executive abilities such as updating and inhibition Further frontoparietal networks associated with working memory and executive function have been shown to be activated to a greater degree when it is harder to achieve speech comprehension To date less work has focused on sign language communication under adverse conditions or the role of gestures accompanying speech communication under adverse conditions It has been proposed that the role of working memory in communication under such conditions is to keep fragments of an incomplete signal in mind updating them as appropriate and inhibiting irrelevant information until an adequate match can be achieved with lexical and semantic representations held in

long term memory Recent models of working memory highlight an episodic buffer whose role is the multimodal integration of information from the senses and long term memory It is likely that the episodic buffer plays a key role in communication under adverse conditions The aim of this research topic is to draw together multiple perspectives on communication under adverse conditions including empirical and theoretical approaches This will facilitate a scientific exchange among individual scientists and groups studying different aspects of communication under adverse conditions and or the role of cognition in communication As such this topic belongs firmly within the field of Cognitive Hearing Science Exchange of ideas among scientists with different perspectives on these issues will allow researchers to identify and highlight the way in which different internal and external factors interact to make communication in different modalities more or less successful across the lifespan Such exchange is the forerunner of broader dissemination of results which ultimately may make it possible to take measures to reduce adverse conditions thus facilitating communication Such measures might be implemented in relation to the built environment the design of hearing aids and public awareness *Resources in Education* ,1982
