Practical Diving Tom Mount,Akira J. Ikehara,1975 **Catalog of Copyright Entries. Third Series** Library of Congress. Copyright Office,1976 *The New Practical Diving* Tom Mount,Akira J. Ikehara,1979 The chapters on psychological aspects of diving and stress are a must for every divers reading list The marine life section has the detail to satisfy a diver thirsting for more than a sketch on marine life Tom and Ike have experience as diving officers for the University of Miami s Rosentstiel School of Marine and Atmospheric Science as commercial divers and as staff members of a national certification association They are dedicated divers who share their many years of experience found within the pages of this text with you Price 19 95 **Man and the Marine Environment** Robert A. Ragotzkie,J. Robert Moore,2018-01-18 Marine recreation represents one of the most important uses of our marine and coastal environments This is a natural result of three things population density in coastal areas increasing interest in outdoor recreation and the special lure of the sea What the poet may think of as the lure of the sea today s recreation planner would consider a combination of resource directed and image directed desires **A Bibliographical Sourcebook of Compressed Air, Diving, and Submarine Medicine** Ebbe Curtis Hoff,Leon Jack Greenbaum,1966 **Bibliography on Diving and Diving Safety for a Scientific Diving Program** Margaret A. Rioux,1987 Diving scientific diving and diver safety are specialized subject areas not generally well represented in even the largest of academic libraries largely because of difficulties in locating appropriate items to include in the collection However in order to adequately fulfill his her responsibilities the Diving Safety Officer of a scientific diving program needs easy access to a broad range of books reports and journals covering all aspects of diving This bibliography outlines a comprehensive collection appropriate to the needs of a scientific diving program in a research or academic institution Items are grouped in broad subject areas corresponding to various aspects of the diving program Both title and author indexes are also included **Underwater Medicine and Related Sciences** Margaret F Werts,1973 *Subject Catalog, 1975* Library of Congress,1975 **The Complete Outfitting & Source Book for Sport Diving** Larry Clinton,1978 **Sport Scuba Diving in Depth** Tom Griffiths,1985 **Subject Catalog** Library of Congress,1980-07 **Subject Guide to Books in Print** ,1993 **Geothermal Heat Flux at the COST B-2 and B-3 Wells, U. S. Atlantic Continental Margin** B. Della Vedova,1987 Heat flow estimates at two sites on the U S Atlantic continental margin are presented An estimate of the heat flowing from the basement also has been obtained About 4 8 km of sediments penetrated at the COST B 2 and 4 0 km at the COST B 3 were deposited since the Upper Jurassic Well logs were used to evaluate thermal gradients and sedimentation rates whereas thermal conductivities and radiogenic heat productions were measured on drill cuttings samples A procedure to estimate in situ thermal conductivity from drill cuttings and well logs is described A substantial set of samples in the form of drill cuttings were sorted in four major lithologies sandstones siltstones shales and limestones Laboratory measurements of density porosity thermal conductivity quartz % potassium % uranium ppm and

thorium ppm were performed on 128 reorganized and pulverized samples A significant correlation of the matrix thermal conductivity to quartz and potassium content was found In situ porosity and volume fraction of each lithology determined mainly from well logs were used to calculate in situ mean thermal conductivity Finally the mean in situ vertical component of the thermal conductivity as required for heat flow values has been estimated from a correction factor for the anisotropy of each lithology The in situ temperature and anisotropy effects substantially decrease estimates of thermal conductivity at depth Below the uppermost 1 km in both wells the best estimate of the thermal gradient is 26.3 °C km⁻¹ at COST B 2 and 26.1 °C km⁻¹ at COST B 3 whereas in situ mean thermal conductivities range between about 1.8 and 1.9 W m⁻¹ K⁻¹ 1.4 3 4 5 T C U The average heat flow is estimated as about 45 mWm⁻² 1.07 H F U at COST B 2 and 44 mWm⁻² 1.06 H F U at COST B 3 with an uncertainty of about 20-25% The mean radiogenic production in sediments at the two sites has been estimated as 1.83 COST B 2 and 1.44 COST B 3 10.6Wm⁻³ With a 12-14 km thick sedimentary sequence a radioactive contribution of 20-25 mWm⁻² can be expected The effects of sediment deposition compaction pore water advection and radiogenic heat production have been combined in a numerical model Hutchison 1985 to estimate the undisturbed basement heat flux Although the sedimentation depresses the basement heat flux by 15-20% this effect is more than compensated by radioactive heat production in the sediments so that the surface flux is estimated to be higher than that from the basement The latter is calculated at about 33-39 mWm⁻² 0.8-0.9 H F U a relatively low value The overall uncertainty is about 20-25% and other estimates on continental margins with thick sediments e.g. Reiter and Jessop 1985 probably have at least a similar uncertainty
