*Personal Computer Impact Analysis of Windows Environments*, 1992      *Science and Global Challenges of the 21st Century - Innovations and Technologies in Interdisciplinary Applications* Ekaterina Isaeva, Álvaro Rocha, 2023-05-25 This book comprises proceedings of the 2022 International Forum Science and Global Challenges of the XXI Century The main principle of the Forum's program is interdisciplinarity the formation of end to end innovation chains fundamental and applied research technology development implementation and wide application of networks and systems In 2022 the central theme of the forum is innovations and technologies in interdisciplinary applications The book covers a wide range of knowledge communication methodologies and effective technologies for processing data in various forms and areas The book might interest researchers working at the interface of disciplines such as e learning digital humanities computational linguistics cognitive studies GIS digital geography machine learning and others It can also be a valuable source of information for Bachelor and Master students with open curricula or majors and minors who seek to find a balance between several fields of their interest      *Geological Evolution of Central Asian Basins and the Western Tien Shan Range* Marie-Françoise Brunet, Tom McCann, Edward R. Sobel, 2017-10-10 The geological evolution of Central Asia commenced with the formation of a complex Precambrian Palaeozoic orogen Cimmerian blocks were then accreted to the southern margin in the Mesozoic leading to tectonic reactivation of older structures and discrete episodes of basin formation The Indian and Arabian blocks collided with Asia in the Cenozoic leading to renewed structural reactivation intracontinental deformation and basin development This complex evolution resulted in the present day setting of an elongated Tien Shan range flanked by large Mesozoic Cenozoic sedimentary basins with smaller intramontane basins distributed within the range This volume presents multidisciplinary results and reviews from research groups in Europe and Central Asia that focus on the western part of the Tien Shan and some of the adjacent large sedimentary basins These works elucidate the Late Palaeozoic Cenozoic tectono sedimentary evolution of the area Emphasis is given to the collision of terranes and continents and the ensuing fault reactivations The impact of climatic changes on sedimentation is also examined      *The Patna Law Times*, 1942      *Scientific and Technical Aerospace Reports*, 1970      *Cinématique tertiaire et rotations de blocs dans l'ouest de l'Asie centrale (Tien Shan Kirghiz et dépression Tadjik)* Jean-Charles Thomas, 1993 Les mécanismes de déformation et la cinématique Tertiaires de l'Ouest de l'Asie centrale ont été abordés par le biais du paléomagnétisme et de la géologie structurale La présente étude a été réalisée dans la dépression Tadjik et le Tien Shan Kirghiz situés respectivement au nord ouest et au nord de la syntaxe ouest himalayenne et du Pamir L'étude paléomagnétique permet de mettre en évidence deux domaines distincts de rotations de part et d'autre de la faille décrochante dextre de Talass Fergana qui traverse le Tien Shan de part en part À l'Est de cette faille les bassins Cénozoïques du Tien Shan présentent une rotation faible ou nulle par rapport à l'Asie stable À l'inverse l'Ouest les rotations antihoraires sont significatives de l'ordre de 20° dans le Bassin de Fergana de 15-50° dans la dépression Tadjik L'étude

structurale montre que le contexte cinématique régional combine chevauchement et décrochement s'inscrivant dans la déformation et la rotation des bassins de type compressifs sont principalement localisés dans la couverture sédimentaire. À l'opposé des zones faillées d'échelle crustale qui les limitent, la cinématique Tertiaire du Tien Shan et de la dépression Tadjik apparaît fortement associée au pointonnement vers le Nord du Pamir par rapport à l'Asie. La faille de Talass-Fergana est une discontinuité majeure à l'Ouest de laquelle la déformation est accommodée par le paississement du décrochement et des rotations de blocs.
