Power And Policy In China:

Energy Policy in China Chi-Jen Yang, 2017-06-26 Energy policy has always been an important part of China's national policy agenda. Although the overall Chinese economy has become largely market driven, its energy sectors are still subject to varying degrees of government control. Authoritarian governance allows China to move very quickly in some areas such as hydropower, nuclear power, wind power, and solar energy. However, conflicting interests have also led to infighting and impasses. With a specific focus on energy supply, *Energy Policy in China* provides a succinct account of China's energy policy over the last sixty years. Using separate chapters dedicated to each energy sub-sector, Chi-Jen Yang introduces and discusses both the achievements and failures of the Chinese energy systems as well as the strengths and insufficiencies of energy governance in China. This book is an interdisciplinary study written for a broad audience, including those researching and working in the fields of energy policy, business strategy, and government administration, as well as Chinese and Asian Studies more broadly.

Eu-china Relationship, The: European Perspectives - A Manual For Policy Makers Kerry Brown, 2014-11-27 This book brings together 30 papers commissioned from 2011 to 2013 by the EU-funded Europe China Research and Advice Network (ECRAN). These papers, thematically grouped in sections on economics, society, and politics, were written by some of the world's leading China experts in Europe and give a European perspective of this complex relationship. The papers provide a broad overview of how Europeans see the key challenges currently faced by China and Europe, as well as a unique insight into the related policy aspects of the vexed and complex relationship of the two largest trading partners in the world. *The EU China Relationship: European Perspectives* is written in a highly pragmatic manner, focusing on specific political, economic, and social issues that impact on international relations. It is an essential EU toolkit and policy handbook for academics and policy makers in government and business who are engaging with China, not just in the EU but across the world.

Handbook of Energy Politics Jennifer I. Considine, Keun-Wook Paik, 2018 Starting with the fundamentals of the global energy industry, *Handbook of Energy Politics* goes on to cover the evolution of capital and financial markets in the energy industry, the effects of technology, environmental issues, and global warming and geopolitics. The book concludes by considering the future, including the lessons learned from history, where we are most likely to be heading, and what steps we can take to mitigate potential energy risks. This Handbook will be an invaluable resource for upper-level graduates and postgraduate scholars.

Sutter,2005-04-14 China's rapid military and economic growth has fuelled a steady stream of analysis and debate about the PRC's motivations and objectives regarding the United States Yet until now there has not been a sustained single authored assessment in English of China's expanding influence in Asia in the post Cold War period Respected analyst Robert G Sutter draws on his extensive experience in the region to explore the current debate on China's rise and its meaning for U S interests by examining in detail China's current and historical relations with the key countries of Asia He finds a range of motivations underlying China's recent initiatives Some incline Chinese policy to be cooperative with the United States others to be competitive and confrontational Sutter's nuanced study shows that U S power and influence continue to dominate Asia and play a critical role in determining China's cooperative or confrontational approach He argues that the Bush administration's policies of firmness and cooperation have encouraged China to stay on a generally constructive track in the region

China's Engine of Environmental Collapse Richard Smith,2020-07-20 As the world hurtles towards environmental oblivion China is leading the charge The nation's CO2 emissions are more than twice those of the US with a GDP just two thirds as large China leads the world in renewable energy yet it is building new coal fired power plants faster than renewables The country's lakes rivers and farmlands are severely polluted yet China's police state can't suppress pollution even from its own industries This is the first book to explain these contradictions Richard Smith explains how the country's bureaucratic rulers are driven by nationalist industrialist tendencies that are even more powerful than the drive for profit under normal capitalism In their race to overtake the US they must prioritise hyper growth over the environment even if this ends in climate collapse and eco suicide Smith contends that nothing short of drastic shutdowns and the scaling back

of polluting industries especially in China and the US will suffice to slash greenhouse gas emissions enough to prevent climate catastrophe *National Security Affairs Conference*, 1980 **Proceedings of the National Security Affairs Conference**, 1980 **The Politics of Nuclear Energy in China** Xu Yi-chong, 2010-10-14 Introduction From Bomb to Power Expanding the Nuclear Energy Program Who Decides The Politics of Nuclear Energy Who Pays The Economics of Nuclear Energy Technology Adoption or Technology Innovation Fuelling the Future the Nuclear Fuel Cycle Who Cares The Public and the Environment Is Nuclear the Future **America's Failure in China, 1941-50** Tang Tsou, 1967 **Chinese Foreign Relations** Robert G.
