Degree Theory and Symmetric Equations Assisted by GAP System Zalman Balanov, Wieslaw Krawcewicz, Dmitrii Rachinskii, Hao-Pin Wu, Jianshe Yu, 2025-01-30 Symmetries are a common feature of real world phenomena in many fields including physics biology materials science and engineering They can help understand the behavior of a system and optimize engineering designs Nonlinear effects such as delays nonsmoothness and hysteresis can have a significant impact on the dynamics and contribute to the increased complexity of symmetric systems The goal of this book is to provide a complete theoretical and practical manual for studying a large class of dynamical problems with symmetries using degree theory methods To study the impact of symmetries on the occurrence of periodic solutions in dynamical systems special variants of the Brouwer degree

the Brouwer equivariant degree and the twisted equivariant degree are developed to predict patterns regularities and symmetries of solutions Applications to specific dynamical systems and examples are supported by a software package integrated with the GAP system which provides assistance in the group theoretic computations involved in equivariant analysis This book is intended for readers with a basic knowledge of analysis and algebra including researchers in pure and applied mathematical analysis graduate students and scientists interested in areas involving mathematical modeling of symmetric phenomena The text is self contained and the necessary background material is provided in the appendices
