**Servicing Personal Computers** Michael H. Tooley, 1994. This book sets out the principles and practice of personal computer servicing in a handy reference manual. It contains a wealth of information including a large number of circuits and block diagrams. Some of the latest software diagnostic routines have been included together with listings and where appropriate actual screen dumps. This fourth edition has been completely rewritten to cover the latest technology such as 32 bit microprocessors and serial communications servicing. Although silicon technology is inherently very reliable the complexity of today's personal computers renders them prone to failure from a number of common causes and some that are not quite so common. In addition other parts of the system including such peripherals as tape and disk drives printers modems and monitors may require routine adjustment and preventive maintenance. This completely rewritten fourth edition still covers the whole range of microcomputer equipment but now also gives a guide to developments and trends such as the new generation of diagnostic software code for which is included in the book and applications such as serial communication and memory and hard disk management.
