Several Complex Variables VI Reinhold Remmert, Wolf Barth, 1990 **Algebraic Geometry II** I.R.

Shafarevich, 1995-12-21 This two part volume contains numerous examples and insights on various topics The authors have taken pains to present the material rigorously and coherently This book will be immensely useful to mathematicians and graduate students working in algebraic geometry arithmetic algebraic geometry complex analysis and related fields

Several Complex Variables III G.M. Khenkin, 1989-02-23 We consider the basic problems notions and facts in the theory of entire functions of several variables i e functions $J z$ holomorphic in the entire n space e_n i e $J E H$ 1 variables as in the case $n = 1$ a central theme deals with questions of growth of functions and the distribution of their zeros However there are significant differences between the cases of one and several variables In the first place there is the fact that for $n = 1$ the zero set of an entire function is not discrete and therefore one has no analogue of a tool such as the canonical Weierstrass product which is fundamental in the case $n = 1$ Second for $n = 1$ there exist several different natural ways of exhausting the space

Commutative Harmonic Analysis II Viktor Petrovich Khavin, Nikolaï Kapitonovich Nikol'skiĭ, 1998 Classical harmonic analysis is an important part of modern physics and mathematics comparable in its significance with calculus Created in the 18th and 19th centuries as a distinct mathematical discipline it continued to develop conquering new unexpected areas and producing impressive applications to a multitude of problems It is widely understood that the explanation of this miraculous power stems from group theoretic ideas underlying practically everything in harmonic analysis This book is an unusual combination of the general and abstract group theoretic approach with a wealth of very concrete topics attractive to everybody interested in mathematics Mathematical literature on harmonic analysis abounds in books of more or less abstract or concrete kind but the lucky combination as in this volume can hardly be found General Topology III A. V. Arhangel'skii, 2013-03-09 The problem of metrization of topological spaces has had an enormous influence on the development of general topology Singling out the basic topological components of metrizability has determined the main reference points in the construction of the classification of topological spaces These are primarily paracompactness collectionwise normality monotonic normality and perfect normality the concepts of a stratifiable space Moore space and u space point countable base and uniform base The method of covers has taken up a leading role in this classification Of paramount significance in the applications of this method have been the properties of covers relating to the character of their elements open covers closed covers the mutual disposition of these elements star finite point finite locally finite covers etc as well as the relations of refinement between covers simple refinement refinement with closure combinatorial refinement star and strong star refinement On this basis a hierarchy of properties of paracompactness type has been singled out together with the classes of spaces corresponding to them the most important of which is the class of paracompacta The behaviour of families of covers with respect to the topology of a space has important significance Here first and foremost is the notion of a refining family of

covers a development which appears in several modifications and together with the notion of paracompactness plays a key role in metrization problems Integrability, Quantization, and Geometry: II. Quantum Theories and Algebraic Geometry Sergey Novikov, Igor Krichever, Oleg Ogievetsky, Senya Shlosman, 2021-04-12 This book is a collection of articles written in memory of Boris Dubrovin 1950 2019 The authors express their admiration for his remarkable personality and for the contributions he made to mathematical physics For many of the authors Dubrovin was a friend colleague inspiring mentor and teacher The contributions to this collection of papers are split into two parts Integrable Systems and Quantum Theories and Algebraic Geometry reflecting the areas of main scientific interests of Dubrovin Chronologically these interests may be divided into several parts integrable systems integrable systems of hydrodynamic type WDVV equations Frobenius manifolds isomonodromy equations flat connections and quantum cohomology The articles included in the first part are more or less directly devoted to these areas primarily with the first three listed above The second part contains articles on quantum theories and algebraic geometry and is less directly connected with Dubrovin's early interests **Algebraic Geometry I** Игорь Ростиславович Шафаревич, 1994 This book is a very readable introduction to algebraic geometry and will be immensely useful to mathematicians working in algebraic geometry and complex analysis and especially to graduate students in these fields *Several Complex Variables* Michael Schneider, Yum-Tong Siu, 1999 Expository articles on Several Complex Variables and its interactions with PDEs algebraic geometry number theory and differential geometry first published in 2000 **Verzeichnis lieferbarer Bücher** , 1988 *Partial Differential Equations III* Mikhail Aleksandrovich Shubin, 1991 **Several Complex Variables, Part 1** Raymond O'Neil Wells, American Mathematical Society, 1977 Contains sections on Singularities of analytic spaces Function theory and real analysis Compact complex manifolds and Survey papers **German books in print** , 1995 Manuscripta Mathematica , 1992 **Partial Differential Equations I** Mikhail Aleksandrovich Shubin, 1992 Translated from the 1988 Russian edition A general introduction for nonspecialist mathematicians and physicists to the classical theory The first volume in a subseries on linear partial differential equations Annotation copyright Book News Inc Portland Or *Supplemento ai Rendiconti del Circolo matematico di Palermo* Circolo matematico di Palermo, 1996 **Singularity Theory** , 1993 **Mathematical Reviews** , 2005 **Several Complex Variables II** G.M. Khenkin, A.G. Vitushkin, 2012-12-06 Plurisubharmonic functions play a major role in the theory of functions of several complex variables The extensiveness of plurisubharmonic functions the simplicity of their definition together with the richness of their properties and most importantly their close connection with holomorphic functions have assured plurisubharmonic functions a lasting place in multidimensional complex analysis Pluri subharmonic functions first made their appearance in the works of Hartogs at the beginning of the century They figure in an essential way for example in the proof of the famous theorem of Hartogs 1906 on joint holomorphicity Defined at first on the complex plane \mathbb{C}^n the class of subharmonic functions became thereafter one of the most fundamental tools in the investigation of analytic functions of one

or several variables The theory of subharmonic functions was developed and generalized in various directions subharmonic functions in Euclidean space \mathbb{R}^n plurisubharmonic functions in complex space \mathbb{C}^n and others Subharmonic functions and the foundations of the associated classical potential theory are sufficiently well exposed in the literature and so we introduce here only a few fundamental results which we require More detailed expositions can be found in the monographs of Privalov 1937 Brelot 1961 and Landkof 1966 See also Brelot 1972 where a history of the development of the theory of subharmonic functions is given **Anzeiger** ,1998-07 **Publicationes mathematicae** Kossuth Lajos Tudományegyetem.
