Sex Differences in Behavior Richard C. Friedman, Ralph M. Richart, Raymond L. Vande Wiele, 1978 *Sex Differences in Social Behavior* Alice H. Eagly, 2013-05-13 In presenting an innovative theory of sex differences in the social context this volume applies social role theory and meta analytic techniques to research in aggression social influence helping nonverbal and group behavior Eagly s findings show that gender stereotypic behavior results from different male and female role expectations and that the disparity between these gender stereotypes and actual sex differences is not as great as is often believed

Exploring Gender and Sex Differences in Behavioral Dyscontrol: from Drug Addiction to Impulse Control Disorders Liana Fattore, Miriam Melis, 2016-04-13 Males and females exhibit discrete attitudes and skills experience dissimilar emotional and psychological needs and react differently to peer pressure lack of self realization or other personal and social expectations In addition they are differently influenced by family history and diverge in the perception of self image and health risks To complicate the matter on gender dichotomy male testosterone levels markedly vary over the course of the day while female levels of sex hormones significantly fluctuate depending upon the menstrual cycle the pre or post menopausal age and the use of oral contraceptives All of these factors interact with genetic background and sex hormonal fluctuations and determine the differences observed in their predisposition to develop an addiction This term is traditionally associated to the abuse of legal and illegal substances However a compulsion toward the engagement in a non drug related rewarding behavior usually involving a natural reward also activates the brain reward system and engenders persistent behavior thus resulting in a diminished control over it These latter behaviors are defined as behavioral addictions This definition encompasses any behavior characterized by the followings i feeling of tension or arousal before the action ii gratification and or relief at the time of performing the act iii inability to resist an urge or drive even against great obstacles or dangers iv absence of consideration for the negative consequences that may affect family friends and or work As such behavioral addictions include compulsive food intake and sexual activity pathological gambling and Internet addiction excessive exercising compulsive buying and pyromania These behaviors which are often classified as impulse control disorders result in actions that are harmful to oneself and or others share common features e g compulsiveness impulsivity impaired decision making craving tolerance withdrawal high rates of relapse and involve dysfunction of several brain circuits Derangement from functional neurobiological mechanisms underpinning both sensitivity to reward and inhibitory control can also lead to compulsive behaviors For instance pathological gambling and other impulse control disorders e g hypersexuality compulsive painting eating and buying are often reported in Parkinson s disease patients Gender dependent differences in the rate of initiation and frequency of misuse of addicting drugs have been widely described Yet men and women also differ in their propensity to become addicted to other rewarding stimuli e g sex food or activities e g gambling exercising The goal of the present Research Topic is to explore and summarize current evidence for gender and sex differences not only in drug

addiction but also in other forms of addictive behaviors Thus it will include studies showing gender dependent differences in drug addiction food addiction compulsive sexual activity pathological gambling Internet addiction and physical exercise addiction Psychiatric comorbidity potential risk factors and the underlying neural mechanisms will be also examined with particular emphasis to the role of sex hormones in modulating addictive and compulsive behaviors

The Handbook of Sex Differences

Volume IV Identifying Universal Sex Differences Lee Ellis,Craig T. Palmer,Rosemary Hopcroft,Anthony W. Hoskin,2023-06-30 The Handbook of Sex Differences is a four volume reference work written to assess sex differences with a primary focus on the human species Based on the authors highly influential 2008 book Sex Differences these volumes highlight important new research findings from the last decade and a half alongside earlier findings In this the work s fourth and last volume two related questions are addressed Are there universal sex differences i e sex differences found in all societies And if the answer is yes what are they and how can each one be theoretically explained To answer the first of these two questions this volume condenses much of the research findings amassed in the book s first three volumes into summary tables Then to help identify likely universal sex differences three versions of social role theory and two versions of evolutionary theory are examined relative to each possible universal sex difference Consideration is even given to religious scriptures as a sixth type of explanation In the concluding analyses 308 likely universal sex differences are identified No single theory was able to explain all these differences Nevertheless the two evolutionary theories were better in this regard than any of the three social role theories including the recently proposed biosocial version of social role theory The Handbook of Sex Differences is of importance for any researcher student or professional who requires a comprehensive resource on sex differences

Gonadal Hormones and Sex Differences in Behavior Sheri A. Berenbaum,1998

Gonadal Hormones and Sex Differences in Behavior Sheri A. Berenbaum,2014-10-13 As the papers in this special issue demonstrate gonadal hormones have powerful effects on the development of the brain and behavior in human beings as in other species Both androgens and estrogens affect behavior throughout development from early prenatal life through adulthood as demonstrated in studies with a variety of methods in several species The articles also describe attempts to identify the mechanisms neural and basic behavioral that mediate hormonal effects on complex human behaviors This issue testifies to the breadth and vitality of research into the ways that hormones affect the development of sex typical behavior and illustrates several important themes that have emerged in human psychoneuroendocrinology First it is now clear that hormones do affect human behavior and the important questions relate to the mechanisms and details of hormone action Second there are many ways to study hormone effects on human behavior and this issue describes these methods and their products Third traditional conceptions of hormone behavior relations have generally stood the test of time but recent developments have begun to reveal the complexity of these relations Taken as a whole the articles in this special issue are interesting and worthwhile reading in their own right but they may also act to stimulate developmental neuropsychologists to consider hormones in their own studies

From Sex Differences in Neuroscience to a Neuroscience of Sex Differences: New Directions and Perspectives ,2015 This

research topic aims to integrate scattered findings on sex differences in neuroscience into a broader theory of how the human brain is shaped by sex and sex hormones in order to cause the great variety of sex differences that are commonly observed. It can be assumed that these differences didn't occur arbitrarily but that they rather determined and still determine evolutionary success of individuals and were shaped by the processes of natural and in particular sexual selection. Therefore sex differences are not negligible and sex difference research cannot be discriminating against one sex or the other. In fact a better understanding of the underlying causes of sex differences has great advantages for both men and women and society as a whole not only in terms of health care but in every aspect of life. Gender equality can only work out if it is equally well understood for men and women what their individual resources and needs are. Therefore it is of great importance to pave the way for identifying the underlying principles of structural and functional brain organization that cause men and women to act, think and feel differently. To this end it is of particular interest to identify possible similarities and interrelations between sex differences that did so far stand separately in order to investigate whether they share a common source. To understand where a specific sex difference comes from and whether or not it is caused by the same principle as other sex differences it is necessary to explicitly link sex differences in behavior to their neuronal correlates and vice versa link sex differences in brain structure and function to their behavioral outcomes. In particular a new understanding of male and female brain functioning may arise from findings on how sex hormones interact with various neurotransmitter systems. In the past few years several findings demonstrated that women's behavior is influenced by the sex hormone fluctuations they experience naturally during their menstrual cycle to the extent that sex differences may only be detectable in one cycle phase but not another. The study of menstrual cycle dependent effects gives important hints about which sex differences are activational and which are organizational. Additionally it only recently came to attention that hormonal contraception may alter a woman's mood, cognition and behavior as a consequence of changes in brain structure and function. The underlying mechanisms are so poorly understood that it is even hard to predict whether hormonal contraception will mask or amplify sex differences in a given task. Since the oral hormonal contraceptive pill is meanwhile used by 100 million women worldwide and even by teenagers whose brains are not yet fully developed the question of how the synthetic steroids contained in hormonal contraceptives act on the brain is to be studied hand in hand with naturally occurring sex differences. This topic summarizes the current state of the art in sex difference research and gives new perspectives in terms of hypothesis generation and methodology. Both are necessary to gain a complete picture of what it is that makes a brain male or female and move towards a neuroscience of sex differences.

Sex Differences in Brain and Behavior Cynthia L. Jordan, S. Marc

Breedlove, 2022-07-31 The extent to which there are differences between the sexes is an area of interest to physiologists, neuroscientists and clinicians as well as social scientists and the general public. This book examines recent research on the biological basis of sex differences including differences in the brain, behavior, the immune system and disease states.
