*Bitcoin Pricing. An Empirical Analysis* Andreas Bialek, 2019-04-01 Master's Thesis from the year 2018 in the subject Business economics Miscellaneous grade 1.3 University of Hamburg language English abstract In this paper I analyze the relation between daily bitcoin returns and sentiment using a dataset reaching from 2013 to 2018 I find that daily bitcoin returns are not only affected contemporaneously by the bitcoin sentiment measures but also in the next three days while established stock market sentiment measures provide no explanatory power Additionally the negative emotions show return reversal patterns as often observed in sentiment induced mispricing literature resulting in higher returns the next two days after affecting returns negatively today I further find that trading volume affects returns positively today in the next four days and that it is connected with stock market measures For what I know this is also the first academic research that uses the recently introduced Thomson Reuters MarketPsych Indices on cryptocurrencies
