Tracing Technologies Helena Machado, Barbara Prainsack, 2016-02-24 The real heroes of television crime shows in the twenty first

century are no longer police detectives but forensic technologies. The immense popularity of high tech crime television shows has changed the way in which crime scene work is viewed. The term CSI effect was coined to signify a situation where people's views and practices have been influenced by such media representations e.g. judges and jurors putting more weight on forensic evidence that has been produced with high tech tools in particular DNA evidence than on other kinds of evidence. While considerable scholarly attention has been paid to examining the CSI effect on public jurors, judges and police investigators, prisoners' views on forensic technologies and policing have been underexplored. Drawing on a research sample of over 50 interviews carried out with prisoners in Portugal and Austria, this groundbreaking book shows how prisoners view crime scene traces, how they understand crime scene technologies and what effect they attribute to the existence of large police databases on their own lives, careers and futures. Through critically engaging with STS, sociological and criminological perspectives on the use of DNA technologies within the criminal justice system, this work provides the reader with valuable insights into the effect of different legal, political, discursive and historical configurations on how crime scene technologies are utilized by the police and related to by convicted offenders.

EMERGENCE OF WRITING TECHNOLOGIES IN CHINA is the first book to provide a systematic historical rhetorical as well as critical account of the development of major writing technologies in China spanning a history of over five thousand years. Baotong Gu covers the development of a wide array of major writing technologies, most of which were native Chinese inventions including oracle inscriptions, bronze inscriptions, brush pens, ink, early forms of paper, the modern form of paper, block printing, movable type, the Chinese typewriter, the computer and the Internet. FROM ORACLE BONES TO COMPUTERS distinguishes itself from other historical studies because it examines these technologies from a rhetorical perspective to explore how the cultural context, especially the role of language and communication, helps construct and shape the meanings of Chinese writing technologies. An innovative feature of this book is its development of a six element operationalized model.
