Scattering theory is roughly speaking perturbation theory of self adjoint operators on the absolutely continuous spectrum It has its origin in mathematical problems of quantum mechanics and is intimately related to the theory of partial differential equations Some recently solved problems such as asymptotic completeness for the Schrödinger operator with long range and multiparticle potentials as well as open problems are discussed Potentials for which asymptotic completeness is violated are also constructed This corresponds to a new class of asymptotic solutions of the time dependent Schrödinger equation Special attention is paid to the properties of the scattering matrix which is the main observable of the theory The book is addressed to readers interested in a deeper study of the subject

Inverse Problems Gottfried Anger,1993-09 Most mathematical problems in science technology and medicine are inverse problems Studying such problems is the only way of completely analyzing experimental results Inverse problems may be considered among the pressing problems of current mathematical research

Modeling and Analysis of Transient Processes in Open Resonant Structures Yuriy K. Sirenko,Staffan Ström,Nataliya P. Yashina,2007 This book describes a systematic approach to scattering of transient fields which can be introduced in undergraduate or graduate courses The initial boundary value problems considered describe the transient electromagnetic fields formed by open periodic compact and waveguide resonators The methods developed and the mathematical and physical results obtained provide a basis on which a modern theory for the scattering of resonant non harmonic waves can be developed
