Recovery From Brain Damage Reflections And Directions:

Recovery from Brain Damage F.D. Rose, D.A. Johnson, 2012-12-06 The present volume is based upon the invited review lectures delivered to the European Brain and Behaviour Society's Workshop on Recovery of Function Following Brain Damage held at Goldsmiths College University of London in April 1991. Coming exactly ten years after the Society's first meeting on this subject held at Erasmus University Rotterdam, a major objective of the Workshop was to review progress in the intervening years. This task was begun by Professor D.G. Stein in his opening presentation. Looking ahead to possible developments in recovery research in the next decade was the subject of Professor B. Kolb's closing lecture. The intervening presentations reviewed progress made in specific areas of recovery research. In addition to reviewing progress over the last decade, we sought to achieve an additional objective in the way that the invited review lectures were organised. This was to bring together those doing basic research, usually animal research, and those whose lectures were paired research interests are more clinically orientated. Thus some were concentrating on the results of animal studies and one on clinical research findings.

International Handbook of Neuropsychological Rehabilitation Anne-Lise Christensen, Barbara P. Uzzell, 2013-04-17 I am extraordinarily pleased to have been asked by Drs Christensen and Uzzell to write the foreword for this handbook. This handbook is the result of the most recent of a series of conferences held in Copenhagen, Denmark, at five year intervals over the past 15 years, under the guidance and leadership of Dr Anne-Lise Christensen and under the sponsorship of the Egmont Foundation, which must be acknowledged as well for its constant support of this international effort. The participants in these conferences are all internationally renowned clinicians and scientists. These experts represent not only the area of neuropsychology but disciplines ranging from fundamental neurophysiology and neuroanatomy to medical and financial perspectives on neurological injury and recovery. The participants have to a significant extent remained remarkably constant over this period, and this has allowed increasing intimacy among them both professionally and personally. One felicitous result of this camaraderie has been that the conferences have evolved with an increased focus on topics of the broadest interest across disciplines. One aspect of such a continuing dialogue across disciplines is that specific areas of mutual interest are explored in depth, allowing cross-fertilization of ideas to occur.

Case Studies in Neuropsychological Rehabilitation Barbara A. Wilson, 1999 After a discussion of current theory and research findings relating to rehabilitation of brain injury, this book presents 20 case studies of adults with severe brain injuries sustained several years earlier. The causes of their brain damage include traumatic head injuries, encephalitis, stroke, and hypoxia. Problems that follow such injuries, including loss of self-care skills, memory impairment, language, reading, visuoperceptual, and behavioural difficulties, are analysed in detail. The book describes the premorbid lifestyle of each of the 20 individuals, the onset of their brain damage, subsequent symptoms, neuropsychological assessment, rehabilitation, and long-term outcome. Most chapters include a report by the patient and/or family member, thus providing an extra dimension that helps to increase the reader's

understanding of the predicaments faced by brain injured individuals as they learn to cope with traumatic changes in lifestyle Although improvement for most brain injured people is slow and limited all those described in this book made some progress after their admission to rehabilitation services The exhaustive analysis of each case and step by step description of treatment will encourage professionals and other care givers that much can be done for this severely injured group For students of neuropsychology and rehabilitation the book should serve as an inspiring and informative supplementary text

Mechanisms of Cognitive Development James L. McClelland, Robert Siegler, 2001-03 A study of mechanisms of cognitive development It is part of the Carnegie Mellon Symposia on Cognition Series and focuses on behavioural and neural perspectives of cognitive development

Virtual Environments in Clinical Psychology and Neuroscience Giuseppe Riva, Brenda K. Wiederhold, E. Molinari, 2006-12-15 Virtual Reality VR offers the potential to develop human testing and training environments that allow for the precise control of complex stimulus presentations in which human cognitive and functional performance can be accurately assessed and rehabilitated However basic feasibility and human issues need to be addressed in order for this technology to be reasonably and efficiently applied in clinical psychology The book written in a scholarly style will provide rationales for virtual reality's applicability in clinical psychology We will review the relevant literature regarding theoretical and pragmatic issues for these applications and provide a description of ongoing work developed world wide The topics directly involve critical issues for clinicians designers and users and will be discussed with scientific competence without neglecting clarity and empirical cases with suggestions for actual use The book is divided in three main sections VR in clinical psychology opportunities and challenges VR in treatment of phobias and VR in clinical assessment and therapy

The Effectiveness of Rehabilitation for Cognitive Deficits Peter W. Halligan, Derick T. Wade, 2005 In this book some of the leading clinicians and cognitive neuroscientists consider the effectiveness of cognitive rehabilitation They situate the issues within an overall context that considers the different types and levels of diagnosis and assessment the adequacy of underlying cognitive theory for rehabilitation and more importantly the clinical effectiveness of current treatments to improve functional recovery By employing an evidence based approach that critically evaluates the published literature the book provides for a better understanding of the strengths and limitations of the cognitive approach and hopefully a more realistic expectation of its outcome for patients with neurological deficits The book will serve as a valuable source for a wide spectrum of professionals who deal with the neuropsychological and neurological effects of brain damage

BOOK JACKET **Handbook Of Spatial Research Paradigms And Methodologies** Nigel Foreman, Raphael

Gillett, 2013-01-11 Spatial cognition is a broad field of enquiry emerging from a wide range of disciplines and incorporating a wide variety of paradigms that have been employed with human and animal subjects This volume is part of a two volume handbook reviewing the major paradigms used in each of the contributors research areas This volume considers the issues of neurophysiological aspects of spatial cognition the assessment of cognitive spatial deficits arising from neural damage in

humans and animals and the observation of spatial behaviours in animals in their natural habitats This handbook should be of interest to new and old students alike The student new to spatial research can be brought up to speed with a particular range of techniques made aware of the background and pitfalls of particular approaches and directed toward useful sources For seasoned researchers the handbook provides a rapid scan of the available tools that they might wish to consider as alternatives when wishing to answer a particular spatial research problem Brain Injury and After David Rose,D. A.

Johnson,1996-05-03 Measuring the aftermath of damage to the brain in terms of outcome the extent to which a victim is able to resume a normal lifestyle this volume highlights the potential contribution to the problem that can be made by different professions and disciplines *Early Frontal Lobe Damage and Development* Daniel Tranel,Paul J. Eslinger,2001-05 The consequences of early onset brain damage for the development of cognition and behavior have recently been identified as top research priorities by the NINDS This special issue presents a series of new empirical studies that address this issue in depth from several different perspectives and in both human and animal participants The focus is on the development of personality social behavior and related executive functions in subjects who suffered early damage to prefrontal brain regions A consistent theme throughout is that early onset prefrontal lesions can frequently lead to severe intractable deficits in social behavior and moral reasoning and to impairments of executive functions such as planning judgment and decision making

Processes of Change in Brain and Cognitive Development Yuko Munakata,Mark Johnson,2006-04-06 In recent years there has been a shift within developmental psychology away from examining the cognitive systems at different ages to trying to understand exactly what are the mechanisms that generate change What kind of learning mechanisms and representational changes drive cognitive development How can the imaging techniques available help us to understand these mechanisms This new volume in the highly cited and critically acclaimed Attention and Performance series is the first to provide a systematic investigation into the processes of change in mental development It brings together world class scientists to address brain and cognitive development at several different levels including phylogeny genetics neurophysiology brain imaging behavior and computational modeling across both typically and atypically developing populations Presenting original new research from the frontiers of cognitive neuroscience this book will have a substantial impact in this field as well as on developmental psychology and developmental neuroscience **Cognitive**

Neurorehabilitation Donald T. Stuss,Gordon Winocur,Ian H. Robertson,1999-10-07 This is the first truly comprehensive survey of cognitive rehabilitation spanning the spectrum from basic science to functional outcome The international team of expert authors provide a critical review of theoretical and methodological issues relating to specific rehabilitation procedures and also to programme organization and management The book is based on the twin premises that basic science is the foundation of rehabilitation and that successful outcome is dependent on the specificity of the rehabilitation In demonstrating this the book goes beyond cognitive rehabilitation treatments to cover biological psychological social and historical factors

such as course of recovery mood and motivation family environment education and age With its emphasis on scientific principles multidisciplinary practice and functional outcome this book will serve as an essential resource for all scientists and clinicians concerned with cognitive deficits secondary to altered brain functioning and particularly to psychologists neurologists psychiatrists occupational therapists and physical therapists **Comprehensive Clinical Psychology** A.S.
