Perspectives on Scientific Argumentation Myint Swe Khine, 2011-09-30 Argumentation arriving at conclusions on a topic through a process of logical reasoning that includes debate and persuasion has in recent years emerged as a central topic of discussion among science educators and researchers There is now a firm and general belief that fostering argumentation in learning activities can develop students critical thinking and reasoning skills and that dialogic and collaborative inquiries are key precursors to an engagement in scientific argumentation It is also reckoned that argumentation helps students assimilate knowledge and generate complex meaning The consensus among educators is that involving students in scientific argumentation must play a critical role in the education process itself Recent analysis of research trends in science education indicates that argumentation is now the most prevalent research topic in the literature This book attempts to consolidate contemporary thinking and research on the role of scientific argumentation in education Perspectives on Scientific Argumentation brings together prominent scholars in the field to share the sum of their knowledge about the place of scientific argumentation in teaching and learning Chapters explore scientific argumentation as a means of addressing and solving problems in conceptual change reasoning knowledge building and the promotion of scientific literacy Others interrogate topics such as the importance of language discursive practice social interactions and culture in the classroom The material in this book which features intervention studies discourse analyses classroom based experiments anthropological observations and design based research will inform theoretical frameworks and changing pedagogical practices as well as encourage new avenues of research

Environmental Decision Making Mark Huxham,David Sumner,2000 Science is vital in informing the increasingly urgent and complex environmental decisions that affect all our lives from international agreements on action to limit climate change to decisions on growing genetically modified crops It is clear however that many environmental decisions are taken in the face of scientific uncertainty or ignorance and involve questions of politics and ethics that go beyond science Science alone

cannot answers such questions as Are the risks of nuclear power acceptable and Why should we conserve wild species Science and Environmental Decision Making explores the use and limitations of science in helping to answer environmental questions emphasising the importance of ethics politics and sociology in the decision making process Starting with the question What is meant by a scientific explanation the first three chapters provide a simple introduction to the philosophy and sociology of science and the importance of these fields to environmental scientists They explain the logic of testing ideas in science and look at some of the absolute limits of scientific explanation showing how value judgements inevitably influence scientific work before exploring commercial and political influences on science Chapters 4 10 show how these themes are relevant in case studies ranging from genetic engineering in agriculture to conservation marine eutrophication and the use of models and radiation protection Each chapter is written by a researcher active in the area and begins with an editorial introduction highlighting the major themes illustrated by the case study This book is aimed at students of ecology environmental science environmental management and geography It will also be useful reading for sociology students who study how the science is applied
