Solar Systems Objects

The image is a collage of educational materials for 5th grade science, focusing on solar system objects. It includes a diagram of the solar system with the sun, planets, and moons, a laptop displaying a lesson plan, and several worksheets with text and images.

Solar System Objects

Comets

A comet is a chunk of frozen gases, rock, ice, and dust. Comets have long orbits around the sun. When a comet gets close to the sun, it begins to break apart. The gases and dust that escape from the comet form a long tail. A comet's tail always points away from the sun.

The Flying Objects

Besides planets, there are many other bodies that orbit the sun. Let's find out about some of them.

Moons

Other moons are very different from Earth's moon. Europa, one of Jupiter's moons, may have a liquid ocean under a layer of ice. Another of Jupiter's moons, Io, has the most active volcanoes of any body in the solar system.

Dwarf Planets

Pluto was once called a planet. But in 2006, it was reclassified as a dwarf planet. Dwarf planets are nearly round bodies whose orbits cross the orbits of other bodies. Most are found in a region of the solar system beyond Neptune's orbit called the Kuiper belt. These objects are far away and hard to study. Quaoar, whose orbit was discovered in 2002.

Asteroids

Asteroids are rock and iron objects that orbit the sun. Millions of them are found in the wide region between Mars and Jupiter. Asteroids are made of different materials. Some are made of rock, some of iron, and some of a mix of the two.

Meteoroids

Each day, tons of meteoroids enter Earth's atmosphere. Most meteoroids burn up in Earth's atmosphere, causing a streak of light called a meteor. Meteoroids that reach Earth's surface are called meteorites.
