## Science Magic Science Magic:

Science Magic in the Kitchen Richard Robinson, 2003 Helps to find out about everyday science while performing as a magician and dazzle your friends and family This book uses objects to be found in a different room in the house to explain some basic scientific principles through magic tricks or experiments It is complemented with cartoon illustrations **Magic, Science and Society** Alex Dennis, 2024-06-14 Magic Science and Society investigates the way the rationality debate has developed over the last century from E E Evans Pritchard's study of Azande magic through Peter Winch's argument that there can be no such thing as a social science across the arguments about the proper status of science in the 1970s and 1980s to the epistemological and ontological turns of the early twenty first century Different people have different understandings of what is rational some practise magic some orientate to legal convention and tradition and others defer to science and logic Starting with anthropological studies of witchcraft and working through to contemporary debates about epistemology and ontology in social science this book systematically examines the ways key questions about these issues have been framed and answered These include Can magic be real either for members of the cultures that practise it or more generally How can we arbitrate between different types of rationality Is science a benchmark for studying other forms of rationality or just a cultural practice like any other What are the implications of these issues for the social sciences themselves This book will be of interest to anthropologists sociologists philosophers of the social sciences and science studies practitioners *Magic, Science and Religion and the Scope of Rationality* Stanley J. Tambiah, 1990-03-22 This accessible and illuminating book explores the classical opposition between magic science and religion Magical Science Eric Ladizinsky, 1994 Presents scientific experiments that appear to be magic tricks More Magical Science: Magic Tricks for Young Scientists Eric Ladizinsky, 1994 *Magic and the Supernatural in Medieval English Romance* Corinne J. Saunders, 2010 This study looks at a wide range of medieval English romance texts including the works of Chaucer and Malory from a broad cultural perspective to show that while they employ magic in order to create exotic escapist worlds they are also grounded in a sense of possibility and reflect a complex web of inherited and current ideas Book Jacket *Magical Science: Magic Tricks for Young Scientists* Eric Ladizinsky, 1992 Presents scientific experiments that appear to be magic tricks The Social Scientific Study of Exorcism in Christianity Giuseppe Giordan, Adam Possamai, 2020-06-01 This book presents an academic analysis of exorcism in Christianity It not only explores the crisis and drama of a single individual in a fight against demonic possession but also looks at the broader implications for the society in which the possessed lives In recognition of this coverage includes case studies from various geographical areas in Europe North and South America and Oceania The contributors explore the growing significance of the rite of exorcism both in its more structured format within traditional Christian religions as well as in the less controlled and structured forms in the rites of deliverance within Neopentecostal movements They examine theories on the interaction between religion magic and science to present new and

groundbreaking data on exorcism The fight against demonic possession underlines the way in which changes within the religious field such as the rediscovery of typical practices of popular religiosity challenge the expectations of the theory of secularization This book argues that if possession is a threat to the individual and to the equilibrium of the social order the ritual of exorcism is able to re establish a balance and an order through the power of the exorcist This does not happen in a social vacuum but in a consumer culture where religious groups market themselves against other faiths This book appeals to researchers in the field

*Magic and Magicians in the Middle Ages and the Early Modern Time* Albrecht Classen,2017-10-23 There are no clear demarcation lines between magic astrology necromancy medicine and even sciences in the pre modern world Under the umbrella term magic the contributors to this volume examine a wide range of texts both literary and religious both medical and philosophical in which the topic is discussed from many different perspectives The fundamental concerns address issue such as how people perceived magic whether they accepted it and utilized it for their own purposes and what impact magic might have had on the mental structures of that time While some papers examine the specific appearance of magicians in literary texts others analyze the practical application of magic in medical contexts In addition this volume includes studies that deal with the rise of the witch craze in the late fifteenth century and then also investigate whether the Weberian notion of disenchantment pertaining to the modern world can be maintained Magic is oddly but significantly still around us and exerts its influence Focusing on magic in the medieval world thus helps us to shed light on human culture at large

**Cultures of Energy** Sarah Strauss,Stephanie Rupp,Thomas Love,2016-06-16 This path breaking volume explores cultures of energy the underlying but under appreciated dimensions of both crisis and innovation in resource use around the globe Theoretical chapters situate pressing energy issues in larger conceptual frames and ethnographic case studies reveal energy as it is imagined used and contested in a variety of cultural contexts Contributors address issues including the connection between resource flows and social relationships in energy systems cultural transformation and notions of progress and collapse the blurring of technology and magic social tensions that accompany energy contraction and sociocultural changes required in affluent societies to reduce dependence on fossil fuels Each of five thematic sections concludes with an integrative and provocative conversation among the authors The volume is an ideal tool for teaching unique contemporary and comparative perspectives on social theories of science and technology in undergraduate and graduate courses
