Peace And War Reminiscences Of A Life On The Frontiers Of Science:

The San Francisco Nexus in World War II Philip E. Meza,2023-09-05 In The San Francisco Nexus in World War II Freedoms Found Liberties Lost and the Atomic Bomb Meza tells the story of important events in the San Francisco Bay Area that have consequences still felt to date He traces the invention of the atomic bomb from a speculative design for a nuclear weapon sketched on a chalkboard at Berkeley by theoretical physicist Robert Oppenheimer and helped made real by Big Science that was pioneered by his friend and colleague experimental physicist Ernest Lawrence During this time Black Americans migrated to San Francisco to escape the Jim Crow South finding new freedoms good jobs and a leader in a singer turned welder named Joseph James Meza shows how James fought for and won an end to segregation in his union taking a large step toward the civil rights movement At the same time Japanese Americans were forced from their homes by a tragically misguided presidential executive order upheld by the US Supreme Court illustrating the fragility of liberty in America These events continue to shape the world today *Das Lied der Zelle* Siddhartha Mukherjee,2023-03-30 Als im späten 16. Jahrhundert der englische Universalgelehrte Robert Hooke und der holländische Tuchhändler Antonie van Leeuwenhoek durch ihre handgefertigten Mikroskope blickten, sahen sie etwas, was der Biologie und der Medizin ein radikal neues Konzept hinzufügte und beide Wissenschaften für immer veränderte: Komplexe, lebende Organismen bestehen aus winzigen, in sich geschlossenen und sich selbst regulierenden Einheiten. Unsere Organe, unsere Physiologie, unser Selbst, Herz, Blut, Gehirn sind aus diesen kleinen Teilen aufgebaut, den Zellen. Sie ermöglichen all unsere komplexen Körperfunktionen: Immunabwehr, Fortpflanzung, Empfindungsvermögen, Kognition und Erneuerung. Die Schattenseite ist die ungemeine Zerstörungskraft dysfunktionaler Zellen, die einen Körper seiner Lebensfähigkeit berauben können. Mukherjee erzählt vom enormen Potenzial unseres vertieften Verständnisses der Zellphysiologie und -pathologie. Es hat eine Revolution in Biologie und Medizin ausgelöst: transformative Medikamente hervorgebracht und Menschen verändert. Brotherhood of the Bomb Gregg Herken,2013-08-13 The scientists who made the nuclear bomb are the focus of this detailed engrossing history of one of the greatest scientific discoveries of the 20th century. Publishers Weekly The story of the twentieth century is largely the story of the power of science and technology. Within that story is the incredible tale of the human conflict between Robert Oppenheimer, Ernest Lawrence, and Edward Teller, the scientists most responsible for the advent of weapons of mass destruction. The story of these three men, builders of the atomic and hydrogen bombs, is fundamentally about loyalty to country, to science, and to each other, and about the wrenching choices that had to be made when these allegiances came into conflict. In *Brotherhood of the Bomb*, Gregg Herken gives us the behind-the-scenes account based upon a decade of research, interviews, and newly released Freedom of Information Act and Russian documents. **Five Days in August** Michael D. Gordin,2015-08-18 Most Americans believe that the Second World War ended because the two atomic bombs dropped on Japan forced it to surrender. *Five Days in August* boldly presents a different interpretation: that the military did not clearly

understand the atomic bomb's revolutionary strategic potential that the Allies were almost as stunned by the surrender as the Japanese were by the attack and that not only had experts planned and fully anticipated the need for a third bomb they were skeptical about whether the atomic bomb would work at all. With these ideas Michael Gordin reorients the historical and contemporary conversation about the A bomb and World War II. Five Days in August explores these and countless other legacies of the atomic bomb in a glaring new light. Daring and iconoclastic it will result in far reaching discussions about the significance of the A bomb about World War II and about the moral issues they have spawned. *Proceedings of the 1998 Conference on the History and Heritage of Science Information Systems* Mary Ellen Bowden, Trudi Bellardo Hahn, Robert Virgil Williams, 1999. The conference on the History and Heritage of Science Information Systems was held October 23-25, 1998 in Pittsburgh, PA prior to the ASIS annual meeting. The conference papers explored the history and heritage of the nature, development and influence of all types of science information systems world wide. It was co-sponsored by ASIS, the ASIS SIG History and Foundations of Information Science, IG-HFIS and the Chemical Heritage Foundation. This was the first conference to explore this topic and this volume will be of great interest to both historians and current practitioners.

Charles Thorpe, 2001. **Big Science** Michael Hiltzik, 2015-07-07. The epic story of how science went big and the forgotten genius who started it all. Entertaining, thoroughly researched, partly a biography, partly an account of the influence of Ernest Lawrence's great idea, partly a short history of nuclear physics and the Bomb. The Wall Street Journal. Since the 1930s the scale of scientific endeavor has grown exponentially. The first particle accelerator could be held in its creator's lap while its successor grew to seventeen miles in circumference and cost ten billion dollars. We have invented the atomic bomb, put man on the moon and probed the inner workings of nature at the scale of subatomic particles, all the result of Big Science, the model of industrial scale research paid for by governments, departments of defense and corporations that has driven the great scientific projects of our time. The birth of Big Science can be traced nearly nine decades ago in Berkeley, California, when a young scientist with a talent for physics declared, "I'm going to be famous." His name was Ernest Orlando Lawrence. His invention, the cyclotron, would revolutionize nuclear physics, but that was only the beginning of its impact, which would be felt in academia, industry and international politics. It was the beginning of Big Science. An exciting book. A bright narrative that captures the wonder of nuclear physics without flying off into a physics Neverland. Big Science is an excellent summary of how physics became nuclear and changed the world. The Plain Dealer, Cleveland. This is the absorbing and expansive Los Angeles Times story that is important for understanding how science and politics entwined in the United States with striking details and revealing quotations. The New York Times Book Review. *The Journal of Military History*, 1999. **Historical Studies in the Physical and Biological Sciences**, 2002. Racing for the Bomb Robert Stan Norris, 2002. Colonel Leslie R.
