Handbook of Pediatric Psychology in School Settings Ronald T. Brown,2003-09-12 In recent years the escalating costs of health care have caused managed care programs to shift the delivery of pediatric psychological services away from specialized medical centers and into primary care and school settings One result has been a radical expansion of school psychology into issues of clinical intervention health promotion and the assessment of psychotropic medications School psychologists are now expected to either deliver or more likely to provide consultation regarding a wide variety of pediatric psychological services Because this is a recent phenomenon very few school based psychologists or allied health practitioners school counselors and social workers have received training in pediatric psychology The mission of this book is to provide them with a comprehensive and authoritative guide to their newly acquired responsibilities in such areas as psychotherapy psychopharmacology health promotion and prevention of disease This book is appropriate for anyone concerned with issues of pediatric psychology in school settings school psychologists pediatric psychologists clinical child psychologists as well as pediatricians and child psychiatrists **Cancer and the Family** Lea Baider,Cary L. Cooper,Atara Kaplan

De-Nour,1996-05-27 This volume is the result of many years of clinical research by medical and health care professionals working with cancer patients and their families It demonstrates the impact of cancer at different stages of a patient s life and how certain factors influence treatment and management **Impact of Children's Chronic Diseases on the Global**

Martin,2012-08-13 Like the ground breaking first edition Pediatric Psycho oncology Second edition puts the child at the centre of medical and psychological care It broadens the focus beyond treatment and cure to consider the quality of life of the child and their family Written by an international group of pediatric oncologists and psychologists psycho oncologists brought together by an expert editorial team it focuses on the real life practical aspects of children undergoing treatment for cancer This edition has been restructured and opens with a major section on Active treatment which includes chapters addressing quality of life pain psychosocial aspects of treatment and interventions art therapy and different fantasy based techniques palliative care communication and education as well as a new chapter on psychopharmacology Shorter sections

then discuss survivorship and care of the dying child including a new chapter on bereavement The final section comprises new chapters on ethical considerations and on addressing the emotional needs of children whose parents have cancer as well as a case study on international collaboration An appendix provides a comprehensive overview of tools for evaluation and assessment in pediatric psychooncology This book is a highly practical resource that will be invaluable for all health care professionals looking after children and adolescents with cancer Praise for the first edition a welcome addition to the field I highly recommend it to all health care professionals involved in the treatment of childhood cancer patients Journal of the American Medical Association November 2004

The Impact of Chronic Illness on the Family, the Educators, and the Community Sharon Louise Fritts,2004 *Living with Childhood Cancer in Thai Families* Authchareeya Patoomwan,2001

The Effects of Perceived Stress and Perceived Social Support on Adjustment in Children and Adolescents with Cancer Daniel J. L. Quiggins,1996 Given the potentially traumatic and stressful nature of having childhood cancer results investigating the level of adjustment among children and adolescents with cancer have been quite surprising demonstrating levels of adjustment similar to the adaptation of children adolescents from the general population Due to these findings studies in pediatric psychology have sought to identify the specific risk and resistance factors that may protect children and adolescents from adjustment problems The current study is the first empirical investigation to examine the combined impact of perceived stress and perceived social support on adjustment Hypotheses for the present study were as follows 1 Children and adolescents in the present study would demonstrate levels of adjustment similar to instrument norms 2 There would be significant differences between reports of adjustment from children adolescents and their parents 3 Significant direct effects would be demonstrated between perceived stress and adjustment 4 Significant direct effects would be demonstrated between perceived social support and adjustment and 5 There would be empirical support for mediating but not moderating effects of perceived social support in the relationship between perceived stress and adjustment Subjects for the current study were 221 children and adolescents with cancer from Children s Hospital San Diego Children s Hospital Los Angeles and Children s Hospital Long Beach Children and adolescents in this study demonstrated levels of adjustment equal to or better than instrument norms and child but not adolescent reports of their adjustment demonstrated nonsignificant correlations with the reports of adjustment from their parents In addition although no mediating effects were demonstrated for perceived social support statistically and clinically significant direct effects were found for both perceived stress and perceived social support Results from the present study may serve to guide future research investigating the risk and protective factors of adjustment in pediatric cancer In addition these findings may suggest effective interventions designed to reduce perceived stress i e relaxation and guided imagery and increase perceived social support i e social skills training and school reintegration and have implications for studying resiliency in children and adolescents facing profound adversity **Mature Beyond Their Years** Kathleen L. Neville,2000 Childhood and adolescent cancer has evolved from an inevitably fatal disease

to a potentially life threatening chronic one This book offers healthcare professionals on providing holistic age appropriate health care by addressing normal developmental tasks during adolescence psychosocial issues of seriously ill adolescents common pediatric cancers and treatments the unique aspects of surviving cancer as a young adult and the need for continued psychosocial support and treatment This book will enhance the practice of healthcare professionals who care for patients with childhood or adolescent cancer

Relationships Between Nonprocedural Pain and Psychological Distress in Children and Adolescents with Cancer Cynthia M. Castro, 1997 Individual differences in the adjustment of pediatric cancer patients indicate some children are at greater risk for psychological distress Nonprocedural pain is a potentially modifiable risk factor but is underinvestigated compared to procedural and terminal stage pain This study investigated nonprocedural pain and distress utilizing a Biobehavioral Model of Pediatric Pain Participants included 291 children between the ages of 8 and 18 from 3 pediatric oncology centers in Southern California Children reported pain intensity using Visual Analogue Scales and pain frequency using a subscale of the Pediatric Cancer Quality of Life Inventory PCQL To assess psychological distress participants completed the Children's Depression Inventory State Trait Anxiety Inventory for Children and the Psychological Functioning subscale of the PCQL Parents completed the Child Behavior Checklist Children completed the PCQL again 6 months after baseline The majority of children 70% reported pain unrelated to procedures or terminal stage Additionally pain highly correlated with distress After controlling for medical and demographic factors Analyses of Covariance ANCOVA revealed children with pain were significantly more distressed than children without pain Hierarchical multiple regressions revealed that pain intensity and frequency were associated with distress severity and pain frequency was associated with frequency of psychological problems The bidirectional influence of distress on pain was investigated and multiple regressions revealed that the severity of distress related to pain intensity and frequency of psychological problems related to pain frequency Bidirectional relationships between pain and distress were not evident in prospective analyses However Time 1 pain and distress were associated with Time 2 reports within the same construct indicating intraindividual stability This study confirms that nonprocedural pediatric cancer pain is widespread and supports the concurrent bidirectional relationship between pain and distress Specifically concurrent distress and pain history appear important for understanding pain Likewise concurrent pain and previous distress appear to influence distress As the relationship between nonprocedural cancer pain and distress is better understood more efforts could focus on developing appropriate pain control methods It is hoped that the resulting interventions will diminish the negative impact of cancer on psychological functioning and minimize adverse effects on quality of life
