1. Introduction

The literature on cancer, of the Children Hospital "JM de los Ríos", allowed us to distinguish two series of solid tumors in children. The first serie (1, 2, 3), from 1937 to 1976, with 581 cases of malignant solid tumors, 75 of which were sarcomas (Table N° 1) and a second serie (4, 5), from 1985 to 2001, with 1.796 cases of solid tumors, with 280 cases of soft tissue tumors (Table N° 2). In both series, soft tissue tumors ranked the third in frequency with the 12.90% and 15.96% of cases, respectively. We refer to these statistics, since they are the base of our discussion.
