Multimedia Projects - Analysis of Existing Strategies and Creation of a New Concept Stefan Hartweg,2002-05-08 Diploma
 Thesis from the year 2002 in the subject Computer Science Applied grade 1 4 A Furtwangen University Digital Media Media
 Computer Science language English abstract This paper tries to define a concept for managing multimedia projects
 efficiently and takes the suitability of existing methods into account Developing a valid solution makes it necessary to look at
 project management as a generic discipline first and then apply the results to the multimedia discipline Only then can we be
 sure that no important aspects of project management have been forgotten nor that existing and working strategies which
 could be applied to multimedia projects have been ignored This paper therefore defines project management and generally
 describes its areas of responsibility The question of whether project management is necessary and beneficial needs to be
 addressed as well After project management and the necessity to actively apply it in some form has been understood in
 general a specific focus on the existing information for multimedia project management will be undertaken It will become
 apparent that different viewpoints exist as to whether multimedia project management should apply project management
 methods of related industry areas such as software development This will justify the need to compare multimedia projects
 with software development projects After having gained an insight into project management as well as the characteristics of
 multimedia projects it is possible to determine the demands that a project management method needs to be able to meet to
 successfully manage multimedia projects It would be beyond the scope of this thesis to analyse every existing method Instead
 one method will be analysed as an example The useful aspects of the analysed method will be identified along with its
 shortfalls in relation to multimedia development Finally recommendations on how the shortfalls could be corrected will be
 made so that a project manager will be able to use the examined method specifically suited to multimedia projects
