The book has 3 main parts: Part I introduces systems thinking and covers why thinking of problems as systems is essential; Part II teaches the Systems Thinking Philosophy and how to use the Systems Principles to guide the way we see, understand, behave, act and utilize Rigorous Methods to augment dealing with individual and organizational challenges; Part III exposes a range of practical applications of Rigorous Methods that apply the Systems Principles, particularly the Model-Based Systems Thinking method that integrates System Dynamics, Architectural, Agent-Based, Stochastic Machine Learning and Artificial Intelligence modeling methods. The reader will be able to classify good and bad systems thinking culture, understand major systemic successes and failures. The main theme of this book is Systems Thinking Philosophy based on System Principles and reliable Methods that are likely to stay in demand over time.

Strategic and System Thinking. Practice of a Strategy Sixbert Sangwa, 2021-06-08 Academic Paper from the year 2017 in the subject Business economics Miscellaneous grade 80 University of South Wales Business School course Strategic Systems Thinking Tools and Techniques language English abstract This essay serves as a critical appraisal of the statement Systems thinking essentially seeks to understand phenomena as a whole formed by the interaction of parts in relation to changing ideas of strategic thinking. It explains how this statement exists within the author's business approach to strategic management. The key themes addressed consist of an analysis of approaches to strategic thinking, systems thinking, complexity perspective, especially the new ways of thinking about strategy, complex adaptive systems, especially Modelling Complexity and The Practice Perspective. Today's business environment is complex, dynamic, multi-faceted and the environment has a far-reaching impact. As for other organizations, the author's company's environment is a combination of several factors that surround and affect it. Therefore, the management of such environment requires managers to carry out a careful analysis of the entire environment to have a clear understanding on how to position the firm in the industry based on fitting the strategy to the current business environment. The implication is that business managers should scan both the internal and external environment to adopt/develop strategies that they think will make their businesses successful. One of the biggest breakthroughs in how we understand and guide change in our organizations is systems theory and systems thinking. System thinking and strategic thinking are two interrelated terms that deal with examining patterns and lead to decision making and the planning for execution at the organizational level. To understand how both strategic and system thinking are used in organizations, it will be clearly defined what systems are. To be able to evaluate strategic system thinking and systems tools in an organization, both strategies and systems need to be explicitly defined. This will also lead to an analysis of the complexity of organizational system.
