Rock Dynamics and Applications - State of the Art Jian Zhao, Jianchun Li, 2013-05-13 Rock dynamics studies the response of rock materials and rock masses under dynamic loading conditions In the last a couple of decades the development of experimental and computational techniques has been able to capture the progress of fracturing in microsecond steps allowing the exploration on how the fracture is initiated propagated and branched

Theory, Numerics and Applications of Hyperbolic Problems II Christian Klingenberg, Michael Westdickenberg, 2018-06-27 The second of two volumes this edited proceedings book features research presented at the XVI International Conference on Hyperbolic Problems held in Aachen Germany in summer 2016 It focuses on the theoretical applied and computational aspects of hyperbolic partial differential equations systems of hyperbolic conservation laws wave equations etc and of related mathematical models PDEs of mixed type kinetic equations nonlocal or and discrete models found in the field of applied sciences

Finite Volume Methods for Hyperbolic Problems Randall J. LeVeque, 2002-08-26 Publisher Description

Nonlinear Elasticity Y. B. Fu, R. W. Ogden, 2001-05-07 Nonlinear elasticity is concerned with nonlinear effects associated with deformations of elastic bodies subjected to external forces or temperature variations It has important applications in many areas including the aerospace and rubber industries and biomechanics This book written by a

group of leading researchers invited especially for the purpose provides an up to date and concise account of the fundamentals of the theory of nonlinear elasticity and a comprehensive review of several major current research directions in this important field. It combines the characteristics of coherence and detail found in standard treatises with the strength and freshness of research articles. The emphasis is placed firmly on coverage of modern topics and recent developments rather than on the very theoretical approach often found. The book will be an excellent reference source for both beginners and specialists in engineering applied mathematics and physics. It is also ideally suited for graduate courses. Mathematical Reviews, 2003 **SIAM Journal on Scientific Computing**, 1996 **Mechanics of Phase Transformations and Shape Memory Alloys** L. Catherine Brinson, Brian Moran, 1994. Papers from the November 1994 conference illustrate diverse approaches to the underlying mechanics issues in phase transformations such as continuum descriptions of phase transformations, the motion of phase boundaries, nucleation of phase transformation, pattern formation in phase transitions and Shock Induced Transitions and Phase Structures in General Media J.E. Dunn, Roger Fosdick, Marshall Slemrod, 2012-12-06. This IMA Volume in Mathematics and its Applications SHOCK INDUCED TRANSITIONS AND PHASE STRUCTURES IN GENERAL MEDIA is based on the proceedings of a workshop that was an integral part of the 1990-91 IMA program on Phase Transitions and Free Boundaries. The workshop focused on the thermodynamics and mechanics of dynamic phase transitions that are mainly inertially driven and brought together physicists, metallurgists, mathematicians, engineers and molecular dynamicists with interests in these problems. Financial support of the National Science Foundation made the meeting possible. We are grateful to J. E. Dunn, Roger Fosdick and Marshall Slemrod for organizing the meeting and editing the proceedings. A. Vner Friedman, Willard Miller Jr. PREFACE. When a body is subjected to a strong shock, the material may suffer severe local structural changes. Rapid solidification, liquification or vaporization can occur and moreover complex structural heterogeneity is often left in the wake of the passing wave. Thus inertially driven shock waves raise fundamental questions involving experiment, theory and mathematics which bear on phase stability and metastability as well as on reaction kinetics and appropriate measures of phase structure. **Kinetics of Adiabatic Phase Boundaries and Decomposition of Metastable States in Solids** Shing-Chung Ngan, 1997 **Smart Structures and Materials 1993** Harvey Thomas Banks, 1993 *Adiabatic Propagation of Phase Boundaries in a Thermoelastic Bar* Ralph Joseph Worthington, 1995 Publications du Laboratoire Jacques-Louis Lions, 2007 *Classical and Modern Branching Processes* Krishna B. Athreya, Peter Jagers, 1997. This IMA Volume in Mathematics and its Applications CLASSICAL AND MODERN BRANCHING PROCESSES is based on the proceedings with the same title and was an integral part of the 1993-94 IMA program on Emerging Applications of Probability. We would like to thank Krishna B. Athreya and Peter Jagers for their hard work in organizing this meeting and in editing the proceedings. We also take this opportunity to thank the National Science Foundation, the Army Research Office and the National Security Agency whose financial support made this workshop possible.

A vner Friedman Robert Gulliver v PREFACE The IMA workshop on Classical and Modern Branching Processes was held during June 13 17 1994 as part of the IMA year on Emerging Applications of Probability The organizers of the year long program identified branching processes as one of the active areas in which a workshop should be held Krish na B Athreya and Peter Jagers were asked to organize this The topics covered by the workshop could broadly be divided into the following areas 1 Tree structures and branching processes 2 Branching random walks 3 Measure valued branching processes 4 Branching with dependence 5 Large deviations in branching processes 6 Classical branching processes

Theoretical and Applied Mechanics 1992 Sol R. Bodner, 1993 Contained in this volume are the full texts of the invited general and sectional lectures presented at this conference concerning mechanics and its development The entire field of mechanics is covered including analytical solid and fluid mechanics and their applications A brilliant survey of work in the fields of fluid and solid mechanics is also given The papers are written by leading experts which is reflected in the quality and diversity of the lectures and posters presented they will provide a valuable key to the latest and most important developments in the various sub fields of mechanics

An Introduction to Recent Developments in Theory and Numerics for Conservation Laws Dietmar Kröner, Mario Ohlberger, Christian Rohde, 1999 The book concerns theoretical and numerical aspects of systems of conservation laws which can be considered as a mathematical model for the flows of inviscid compressible fluids Five leading specialists in this area give an overview of the recent results which include kinetic methods non classical shock waves viscosity and relaxation methods a posteriori error estimates numerical schemes of higher order on unstructured grids in 3 D preconditioning and symmetrization of the Euler and Navier Stokes equations This book will prove to be very useful for scientists working in mathematics computational fluid mechanics aerodynamics and astrophysics as well as for graduate students who want to learn about new developments in this area
