Ship Construction and Calculations George Nicol, 2018-02-06 Excerpt from *Ship Construction and Calculations With Numerous Illustrations and Examples for the Use of Officers of the Mercantile Marine Ship Superintendents Draughtsmen Etc* It is hoped the book will be found useful by officers of the Mercantile Marine ship superintendents draughtsmen and shipyard apprentices to all of whom a more or less intimate knowledge of naval architecture is essential To the officer mariner the subject may now be said to be a compulsory one in that those who wish to qualify for the certificate of extra master must pass an examination in it But besides this there are other good reasons why an officer should know something regarding the construction and theory of ships For instance it would enable him if called upon to act as inspector on behalf of his employers at the building of a new vessel or the repair of an old one Or if his vessel were to receive sudden damage calling for immediate temporary repairs it would give him confidence in directing his crew in the carrying out of these In the management of his vessel a knowledge of simple theory would assist him at any time to arrive quickly at satisfactory conditions of draught trim and stability unattainable by mere guess work or a system of trial and error In other ways also such knowledge would prove useful The examples chosen for illustration throughout the book have been selected for their practical interest and every effort has been exerted to make the explanations simple In conclusion the author begs to thank Messrs J L Thompson Sons Ltd Sunderland for their kind permission to publish diagrams and results of calculations of vessels built by them and he also desires to acknowledge his indebtedness to Mr W Thompson Esq for help in reading the proof sheets and in verifying the examples as well as for other valuable assistance rendered while the work was passing through the press About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works *The Design and Construction of Ships* John Harvard Biles, 2009 John H Biles worked as a professor of naval architecture in the University of Glasgow Both volumes embody the lectures on the subjects dealt with at the University and form the most comprehensive and detailed book on the theory of ship building of the 20th century
