The Elements of Murder John Emsley, 2005-04-28. This book is about elements that kill. Mercury, arsenic, antimony, lead, and thallium can be lethal as many a poisoner knew too well. Emsley explores the gruesome history of these elements and those who have succumbed to them in a fascinating narrative that weaves together stories of true crime, enduring historical mysteries, tragic accidents, and the science behind it all. The colourful cast includes ancient alchemists, kings, leaders, a pope, several great musicians, and a motley crew of murderers. Among the intriguing accounts is that of the 17th-century poet Sir Thomas Overbury, who survived four attempts to poison him with mercury but died when given the poison in enema form, under whose direction remains uncertain. Here too is detailed the celebrated case of Florence Maybrick, convicted of poisoning her violent husband James with arsenic but widely believed at the time to be innocent. The question of her guilt is still disputed. Threaded through the book alongside the history is the growing understanding of chemistry and the effects of different chemical substances on the human body. Thousands suffered the ill effects of poisonous vapours from mercury, lead, and arsenic before the dangers were realized. Hatters went mad because of mercury poisoning, and hundreds of young girls working in factories manufacturing wallpaper in the 19th century were poisoned by the arsenic-based green pigments used for the leaves of the popular floral designs. Even in the middle of the 20th century, accidental mercury poisoning caused many deaths in Minamata Bay, while leaded petrol poisoned the whole planet, and arsenic still continues to poison millions in Asia. Through vividly told stories of innocent blunders, industrial accidents, poisoners of various hues, cold cunning, desperate, and deaths that remain a mystery, Emsley here uncovers the dark side of the Periodic Table.
