Engineering Intelligent Systems Barclay R. Brown, 2022-10-04 Engineering Intelligent Systems Exploring the three key disciplines of intelligent systems As artificial intelligence AI and machine learning technology continue to develop and find new applications advances in this field have generally been focused on the development of isolated software data analysis systems or of control systems for robots and other devices By applying model based systems engineering to AI however engineers can design complex systems that rely on AI based components resulting in larger more complex intelligent systems that successfully integrate humans and AI Engineering Intelligent Systems relies on Dr Barclay R Brown s 25 years of experience in software and systems engineering to propose an integrated perspective to the challenges and opportunities in the use of artificial intelligence to create better technological and business systems While most recent research on the topic has focused on adapting and improving algorithms and devices this book puts forth the innovative idea of transforming the systems in our lives our societies and our businesses into intelligent systems At its heart this book is about how to combine systems engineering and systems thinking with the newest technologies to design increasingly intelligent systems Engineering Intelligent Systems readers will also find An introduction to the fields of artificial intelligence with machine learning model based systems engineering MBSE and systems thinking the key disciplines for making systems smarter An example of how to build a deep neural network in a spreadsheet with no code or specialized mathematics required An approach to the visual representation of systems using techniques from moviemaking storytelling visual systems design and model based systems engineering An analysis of the potential ability of computers to think understand and become conscious and its implications for artificial intelligence Tools to allow for easier collaboration and communication among developers and engineers allowing for better understanding between stakeholders and creating a faster development cycle A systems thinking approach to people systems systems that consist only of people and which form the basis for our organizations communities and society Engineering Intelligent Systems offers an intriguing new approach to making systems more intelligent using artificial intelligence machine learning systems thinking and system modeling and therefore will be of interest to all engineers and business professionals particularly systems engineers **New Technologies in**

Benfield,Hongsheng Bi ,Xuemin Cheng,2024-05-15

Deep learning DL mainly composed of deep and complex neural networks such as recurrent network and convolutional network is an emerging research branch in the field of artificial intelligence and machine learning DL revolution has a far reaching impact on all scientific disciplines and every corner of our lives With continuing technological advances marine science is entering into the big data era with the exponential growth of information DL is an effective means of harnessing the power of big data Combined with unprecedented data from cameras acoustic recorders satellite remote sensing and large model outputs DL enables scientists to solve complex problems in biology ecosystems climate energy as well as physical and chemical interactions Although DL has made great strides it is still only beginning to emerge in many fields of marine science especially towards representative applications and best practices for the automatic analysis of marine organisms and marine environments DL in nowadays marine science mainly leverages cutting edge techniques of deep neural networks and massive data which collected by in situ optical or acoustic imaging sensors for underwater applications such as plankton classification and coral reef detection This research topic aims to expand the applications of marine science to cover all aspects of detection classification segmentation localization and density estimation of marine objects organisms and phenomena

*Automatic Generation of Morphological Set Recognition Algorithms* Robert C. Vogt,2012-12-06 Since the early days of

computers machine learning and automatic programming have attracted researchers in computer science and related fields particularly pattern recognition and automatic control theory Most of the learning concepts in machine perception have been inspired by pattern recognition approaches that rely on statistical techniques These statistical techniques have applicability in limited recognition tasks Automatic programming in perception systems has generally been limited to interfaces that allow easy specification of the task using natural language Clearly machine learning and automatic programming can make perception systems powerful and easy to use Vogt's book addresses both these tasks in the context of machine vision He uses morphological operations to implement his approach which was developed for solving the figure ground problem in images His system selects the correct sequence of operators to accept or reject pixels for finding objects in an image The sequence of operators is selected after a user specifies what the correct objects are On the surface it may appear that the problem solved by the system is not very interesting however the contribution of Vogt's work should not be judged by the images that the system can segment Its real contribution is in demonstrating possibly for the first time that automatic programming is possible in computer vision systems The selection of morphological operators demonstrates that to implement an automatic programming based approach operators whose behavior is clearly defined in the image space are required **AI ...** ,2002
