Practical Performance Modeling Application Of The Mosel Language:

Practical Performance Modeling Khalid Begain, Gunter Bolch, Helmut Herold, 2001-01-31 Practical Performance Modeling Application of the MOSEL Language provides an easy to understand but nevertheless complete introduction to system modeling using MOSEL and illustrates how easily MOSEL can be used for modeling real life examples from the fields of computer communication and manufacturing systems

Introduction to Computational Optimization Models for Production Planning in a Supply Chain Stefan Voß, David L. Woodruff, 2013-06-05 The book begins with an easy to read introduction to the concepts associated with the creation of optimization models for production planning These concepts are then applied to well known planning models namely mrp and MRP II From this foundation fairly sophisticated models for supply chain management are developed Another unique feature is that models are developed with an eye toward implementation In fact there is a chapter that provides explicit examples of implementation of the basic models using a variety of popular commercially available modeling languages

Information Technologies and Mathematical Modelling. Queueing Theory and Applications Alexander Dudin, Anatoly Nazarov, Alexander Moiseev, 2018-08-27 This book constitutes the proceedings of the 17th International Conference on Information Technologies and Mathematical Modelling ITMM 2018 named after A F Terpugov and the 12th Workshop on Retrial Queues and Related Topics held in Tomsk Russia in September 2018 The 30 papers presented in this volume were carefully reviewed and selected from 84 submissions The conference covers various aspects of information technologies focusing on queueing theory stochastic processes Markov processes renewal theory network performance equation and network protocols

Applied System Simulation Mohammad S. Obaidat, Georgios I. Papadimitriou, 2012-12-06 Simulation and modeling are efficient techniques that can aid the city and regional planners and engineers in optimizing the operation of urban systems such as traffic light control highway toll automation consensus building public safety and environmental protection When modeling transportation systems such as freeway systems arterial or downtown grid systems the city planner and engineer is concerned with capturing the varied interactions between drivers automobiles and the infrastructure Modeling and simulation are used to effectively optimize the design and operation of all of these urban systems It is possible that in an urban simulation community workshop citizens can work interactively in front of computers and be able using the click of the mouse to walk up to their own front porch looking at the proposed shopping mall alternatives across the street from virtually any angle and proposed bridge or tunnel and see how it can reduce traffic congestion Buildings can be scaled down or taken out their orientation can be changed in order to check the view and orientation in order to have better site with efficient energy conservation The stone or brick material on a building can be replaced by colored concrete or more trees and lampposts can be placed on the site Such flexibility in simulation and animation allows creative ideas in the design and orientation of urban sites to be demonstrated to citizens and decision makers before final realization

Distributed Computer and Communication Networks Vladimir M.

Vishnevskiy, Konstantin E. Samouylov, Dmitry V. Kozyrev, 2019-12-18 This book constitutes the refereed proceedings of the 22nd International Conference on Distributed and Computer and Communication Networks DCCN 2019 held in Moscow Russia in September 2019 The 50 full papers and 2 short papers were carefully reviewed and selected from 174 submissions The papers cover the following topics Computer and Communication Networks and Technologies Analytical Modeling of Distributed Systems and Distributed Systems Applications Delayed and Network Queues Aliakbar Montazer Haghighi, Dimitar P. Mishev, 2016-10-03 Presents an introduction to differential equations probability and stochastic processes with real world applications of queues with delay and delayed network queues Featuring recent advances in queueing theory and modeling Delayed and Network Queues provides the most up to date theories in queueing model applications Balancing both theoretical and practical applications of queueing theory the book introduces queueing network models as tools to assist in the answering of questions on cost and performance that arise throughout the life of a computer system and signal processing Written by well known researchers in the field the book presents key information for understanding the essential aspects of queues with delay and networks of queues with unreliable nodes and vacationing servers Beginning with simple analytical fundamentals the book contains a selection of realistic and advanced queueing models that address current deficiencies In addition the book presents the treatment of queues with delay and networks of queues including possible breakdowns and disruptions that may cause delay Delayed and Network Queues also features Numerous examples and exercises with applications in various fields of study such as mathematical sciences biomathematics engineering physics business health industry and economics A wide array of practical applications of network queues and queueing systems all of which are related to the appropriate stochastic processes Up to date topical coverage such as single and multiserver queues with and without delays along with the necessary fundamental coverage of probability and difference equations Discussions on queueing models such as single and multiserver Markovian queues with balking reneging delay feedback splitting and blocking as well as their role in the treatment of networks of queues with and without delay and network reliability Delayed and Network Queues is an excellent textbook for upper undergraduate and graduate level courses in applied mathematics queueing theory queueing systems probability and stochastic processes The book is also an ideal reference for academics and practitioners in mathematical sciences biomathematics operations research management engineering physics business economics health industry and industrial engineering Aliakbar Montazer Haghighi PhD is Professor and Head of the Department of Mathematics at Prairie View A M University USA as well as founding Editor in Chief of Applications and Applied Mathematics An International Journal AAM His research interests include probability statistics stochastic processes and queueing theory Among his research publications and books Dr Haghighi is the coauthor of Difference and Differential Equations with Applications in Queueing Theory Wiley 2013 Dimitar P Mishev PhD is Professor in the Department of Mathematics at Prairie View A M University USA His research interests include differential and
