Polar And Magnetospheric Substorms:

Polar and Magnetospheric Substorms Syun-Ichi Akasofu, 2011-12-14 It has become increasingly clear that the magnetosphere becomes intermittently unstable and explosively releases a large amount of energy into the polar upper atmosphere. This particular magnetospheric phenomenon is called the magnetospheric substorm. It is manifested as an activity or disturbance of various polar upper atmospheric phenomena such as intense auroral displays and X-ray bursts. Highly active conditions in the polar upper atmosphere result from a successive occurrence of such an elementary activity, the polar substorm, which lasts typically of order one to three hours. The concept of the magnetospheric substorm and its manifestation in the polar upper atmosphere, the polar substorm, has rapidly crystallized during the last few years. We can find a hint of such a concept in the term polar elementary storm introduced by Kristian Birkeland as early as 1908. However, we are greatly indebted to Sydney Chapman, who established the basic foundation of magnetospheric physics and has led researches in this field during the last half century. Indeed, the terms polar magnetic substorm and auroral substorm were first suggested by Sydney Chapman. The concept of the substorm was then soon extended by Neil M. Brice of Cornell University and Kinsey A. Anderson and his colleagues at the University of California Berkeley, who introduced the term magnetospheric substorm. We owe many of these recent developments in magnetospheric physics to the great international enterprise, the International Geophysical Year (IGY), and subsequent international cooperative effort, IGC IQSY.

Physics of Magnetospheric Substorms Syun-Ichi Akasofu, 2012-12-06 Man, through intensive observations of natural phenomena, has learned about some of the basic

principles which govern nature The aurora is one of the most fascinating of these natural phenomena and by studying it man has just begun to comprehend auroral phenomena in terms of basic cosmic electrodynamic processes The systematic and extensive observation of the aurora during and after the great international enterprise the International Geophysical Year IGY led to the concept of the auroral substorm Like many other geophysical phenomena auroral displays have a dual time universal and local time dependence when seen by a ground based observer Thus it was a difficult task for single observers rotating with the Earth once a day to grasp a transient feature of a large scale auroral display Such a complexity is inevitable in studying many geophysical features in particular the polar upper atmospheric phenomena However it was found that their complexity began to unfold when the concept of the auroral substorm was introduced In a book entitled Polar and Magnetospheric Substorms the predecessor to this book I tried to describe the auroral phenomena as completely as possible in terms of the concept of the auroral substorm At that time the first satellite observations of particles and magnetic fields during substorms were just becoming available and it was suggested that the auroral sub storm is a manifestation of a magnetospheric phenomenon called the magnetospheric substorm

Auroral Phenomenology and Magnetospheric Processes Andreas Keiling, Eric Donovan, Fran Bagenal, Tomas Karlsson, 2012-01-10 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 197 Many of the most basic aspects of the aurora remain unexplained While in the past terrestrial and planetary auroras have been largely treated in separate books Auroral Phenomenology and Magnetospheric Processes Earth and Other Planets takes a holistic approach treating the aurora as a fundamental process and discussing the phenomenology physics and relationship with the respective planetary magnetospheres in one volume While there are some behaviors common in auroras of the different planets there are also striking differences that test our basic understanding of auroral processes The objective upon which this monograph is focused is to connect our knowledge of auroral morphology to the physical processes in the magnetosphere that power and structure discrete and diffuse auroras Understanding this connection will result in a more complete explanation of the aurora and also further the goal of being able to interpret the global auroral distributions as a dynamic map of the magnetosphere The volume synthesizes five major areas auroral phenomenology aurora and ionospheric electrodynamics discrete auroral acceleration aurora and magnetospheric dynamics and comparative planetary aurora Covering the recent advances in observations simulation and theory this book will serve a broad community of scientists including graduate students studying auroras at Mars Earth Saturn and Jupiter Projected beyond our solar system it may also be of interest for astronomers who are looking for aurora active exoplanets

Embracing the Track of Term: An Psychological Symphony within **Polar And Magnetospheric Substorms**

In some sort of taken by screens and the ceaseless chatter of fast transmission, the melodic beauty and psychological symphony developed by the published word usually fade into the background, eclipsed by the relentless sound and interruptions that permeate our lives. Nevertheless, situated within the pages of **Polar And Magnetospheric Substorms** a wonderful literary value brimming with fresh thoughts, lies an immersive symphony waiting to be embraced. Crafted by an elegant musician of language, this interesting masterpiece conducts viewers on a psychological trip, skillfully unraveling the hidden tunes and profound impact resonating within each cautiously crafted phrase. Within the depths of this emotional assessment, we can examine the book is main harmonies, analyze its enthralling publishing model, and surrender ourselves to the profound resonance that echoes in the depths of readers souls.
