Klingaman, 1993 **Mechanical Design** J.N. Siddall, 1967-12-15 One of the great weaknesses of modern engineering design

practice is lack of information retrieval facilities for obtaining scientific and technological information relevant to the design

When confronted with a new problem the engineer often scarcely knows where to turn for such information Even in our

modern society this information is extremely difficult to obtain There is some hope that the advent of giant computerized

information retrieval centres will soon alleviate this problem This is particularly true of mechanizing the search for journal

papers and magazine articles on very specific topics for which the designer is able to make very specific requests However

very often the designer requires broad generalized information that is difficult to specify and is usually found in books

Reference lists of books and general papers under broad subject categories are needed This book is an attempt to meet this

need in the general field of Mechanical Engineering It is also intended to show the user the techniques of using information

sources The book should be useful to designers researchers and teachers in all areas of Mechanical Engineering
