Performance Of Computer Communication Systems:

Performance of Computer Communication Systems Boudewijn R. Haverkort, 1983 *Performance of Computer Communication Systems* Boudewijn R. Haverkort, 1998-12-04 Computer communication systems or distributed systems are now able to perform an increasingly diverse range of functions This text aims to provide the techniques and methods to evaluate communication systems and ensure their functionality and the quality of their design It takes a non mathematical problem solving approach and includes assessment techniques for single server queues networks of queues and stochastic petri nets **Performance of Computer-communication Systems** IFIP WG 3, 1984 **Performance Evaluation of Computer and Communication Systems** Lorenzo Donatiello, Randolph Nelson, 2014-01-15 **Performance of Computer Communication Systems** International Federation for Information Processing. Working Group 7.3/TC 6, *Computer and Communication Systems Performance Modelling* Peter J. B. King, 1990 Computer Systems Organization Computer Communication Networks **Performance of Computer-communication Systems** IFIP Working Group 7.3 on Computer System Modelling, International Federation for Information Processing. Technical Committee 6, 1984 **Performance Evaluation of Computer and Communication Systems** Lorenzo Donatiello, Randolph Nelson, 1993-09-15 This volume contains the complete set of tutorial papers presented at the 16th IFIP International Federation for Information Processing Working Group 7 3 International Symposium on Computer Performance Modelling Measurement and Evaluation and a number of tutorial papers presented at the 1993 ACM Association for Computing Machinery Special Interest Group METRICS Conference on Measurement and Modeling of Computer Systems The principal goal of the volume is to present an overview of recent results in the field of modeling and performance evaluation of computer and communication systems The wide diversity of applications and methodologies included in the tutorials attests to the breadth and richness of current research in the area of performance modeling The tutorials may serve to introduce a reader to an unfamiliar research area to unify material already known or simply to illustrate the diversity of research in the field The extensive bibliographies guide readers to additional sources for further reading **Communication Networks And Computer Systems: A Tribute To Professor Erol Gelenbe** Javier A Barria, 2006-06-19 Communication networks and computer systems research is entering a new phase in which many of the established models and techniques of the last twenty years are being challenged The research community is continuing to free itself from past intellectual constraints so that it may fully exploit the convergence of computing and communications Evaluating the performance of emerging communications and computer systems constitutes a huge challenge Thus current research provides a set of heterogeneous tools and techniques embracing the uncertainties of time and space varying environments when the requests for diverse services are made in real time and with very different quality of service expectations These novel techniques will lead to fast and economic service deployment and effective dynamic resource management and hence to new business strategies and infrastructures that will facilitate the

emergence of future services and applications This volume contains contributions and presentations made by leading international researchers at a workshop which was held in April 2004 to honour Professor Erol Gelenbe on the occasion of his inaugural lecture as the Dennis Gabor Chair at Imperial College London

Performance Evaluation of Computer and Communication Systems Jean-Yves Le Boudec, 2010-10-13 Performance evaluation is a critical stage of software and hardware system development that every computer engineer and scientist should master Although complex requiring skills in mathematics measurement techniques and simulation performance evaluation is primarily an art indeed the most difficult stage in a performance analysis is defining the approach once you know what to do it is less difficult to define a plan of attack with your familiar software tools We present a set of topics which we believe should be part of every engineer's intellectual toolkit This includes the statistical exploitation of numerical results in an efficient and ethical way for example how to summarize variability or fairness what transient removal in a simulation is and how to make predictions from a time series We also present well known performance patterns which helps to quickly bring the engineer to the main issues For queuing theory we focus on a subset of very useful results such as operational laws A highlight of the book is the development of Palm calculus also called the importance of the viewpoint which is central to queuing theory Indeed this topic has so many applications to simulation and to system analysis in general that it is a very good time investment This book began as a set of lecture notes for a course given at EPFL

in honor of G nter Haring on the occasion of his emerital celebration and contains invited papers by key researchers in the field of performance evaluation presented at the workshop Performance Evaluation of Computer and Communication Systems Milestones and Future Challenges PERFORM 2010 held in Vienna Austria in October 2010 G nter Haring has dedicated most of his scientific professional life to performance evaluation and the design of distributed systems contributing in particular to the field of workload characterization In addition to his own contributions and leadership in international research projects he is and has been an excellent mentor of young researchers demonstrated by their own brilliant scientific careers The 20 thoroughly refereed papers range from visionary to in depth research papers and are organized in the following topical sections milestones and evolutions trends green ICT and virtual machines modeling mobility and mobile networks communication and computer networks and load balancing analysis and management Performance Evaluation of Distributed Computer-communication Systems Leonard Kleinrock,1988 NBS Special Publication ,1974 Age of Information Aware Communication Systems Antzela Kosta,2020-04-16 Advances in wireless communications and networking technology have taken us towards a pervasively connected world in which a vast array of wireless devices from mobile phones to environmental sensors seamlessly communicate with each other In many of these systems the freshness of the transmitted information is of high importance Characterization of time critical information can be achieved through the so called real time status updates that are messages encapsulated in packets carrying the timestamp of their generation Status updates track time varying content that needs to be transmitted from the generation point to a remote destination in a network To quantify the freshness of information in networked systems a novel metric different from delay or latency termed as age of information AoI has been introduced In this thesis we focus on characterizing and controlling age under various communication system setups The first part of the thesis considers multiple access communication systems and comprises two papers The first paper investigates AoI in relation with throughput in a shared access setup with heterogeneous traffic More specifically we consider a shared access system consisting of a primary link and a network of secondary nodes with multipacket reception MPR capabilities To study the joint throughput timeliness performance we formulate two optimization problems considering both objectives and provide guidelines for the design of such a multiple access system satisfying both timeliness and throughput requirements In the second paper we study the AoI performance in various multiple access schemes including scheduling and random access We present an analysis of the AoI with and without packet management at the transmission queue of the source nodes considering that packet management is the capability to replace unserved packets in the queue whenever newer ones arrive We incorporate the effect of channel fading and network path diversity in such a system and provide simulation results that illustrate the impact of network operating parameters on the performance of the considered access protocols The second part of the thesis considers the characterization of AoI and other freshness performance metrics in a point to point communication link again comprising two papers In the third paper of this thesis we

expand the concept of information ageing by introducing the cost of update delay CoUD metric to characterize the cost of having stale information at the destination Furthermore we introduce the value of information of update VoIU metric that captures the degree of importance of the update received at the destination We employ queue theoretic concepts and provide a theoretical analysis and insights into the prospects of cost and value Finally in the last paper we study the properties of a sample path of the AoI process and we obtain a general formula of its stationary distribution We relate this result to a discrete time queueing system and provide a general expression of the generating function of AoI in relation with the system time and the peak age of information PAoI To illustrate the applicability of the results we analyze the AoI in single server queues with different disciplines and assumptions We build upon these results to provide a methodology for analyzing general non linear age functions for this type of systems *First Pacific Computer Communications Symposium* ,1985
