Perception Of The Visual Environment:

Perception of the Visual Environment Ronald G. Boothe, 2006-04-12 Aimed at students taking a course on visual perception this textbook considers what it means for a man a monkey and a computer to perceive the world After an introduction and a discussion of methods the book deals with how the environment produces a physical effect how the resulting image is processed by the brain or by computer algorithms in order to produce a perception of something out there It also discusses color form motion distance and also the sensing of three dimensionality before dealing with visual perception and its role in awareness and consciousness The book concludes with discussions of perceptual development blindness and visual disorders Visual perception is by its very nature an interdisciplinary subject that requires a basic understanding of a range of topics from diverse fields and this is a very readable guide to all students whether they come from a neuroscience psychology cognitive science robotics or philosophy background Perception of the Visual Environment Benjamin W. see the environment around us its surfaces their layout and their colors and textures where we are in the environment
whether or not we are moving and if we are where we are going what things are good for how to do things to thread a needle
or drive an automobile or why things look as they do The basic assumption is that vision depends on the eye which is
connected to the brain The author suggests that natural vision depends on the eyes in the head on a body supported by the
ground the brain being only the central organ of a complete visual system When no constraints are put on the visual system
people look around walk up to something interesting and move around it so as to see it from all sides and go from one vista to
another That is natural vision and what this book is about **The School Science Review** ,2000 **Bibliographic Guide**

which have come to be viewed as classic experiments The contributing authors are renowned in their field for producing
intelligent and innovative research and together they cover each of the main sub disciplines of cognitive neuroscience As well
as the original study and a description of the methodology and results each chapter includes a personal commentary by the
author of the study in which they share unique insights into the genesis of the idea the how to of carrying out scientific
research and a summary of the most important results In addition leading figures discuss the impact of the study how it
advanced research in the area and the influence it has had on their own and others experimental designs and research
activities By illustrating the scope for creativity that exists in the process of experimental design the authors encourage you
to innovate and design creative approaches to experiments that address major theoretical issues or solve specific problems
