*Robin Hood Maths* Noah Giansiracusa, 2025-08-07 Big companies are using maths to take from the poor and give to the rich Maths professor Noah

Giansiracusa shows how you can beat the system using simple hacks anyone can learn See what the algorithms are trying to hide from you and even better take back your own decision making power Jordan Ellenberg author of *How Not to Be Wrong* In today's data driven world maths is a weapon wielded by banks insurance companies tech firms and government agencies These organizations use sophisticated algorithms to calculate odds make predictions uncover patterns manage risk and optimize actions And they treat you as another number to crunch along the way Robin Hood Maths explains the mathematical methods these companies and agencies use to manipulate and profit off of you It's easy to assume these algorithms are too complex to even understand let alone use for yourself But maths professor Noah Giansiracusa makes the compelling case that anyone can use these same methods without any special training He offers simple hacks and streamlined formulas for beating the number crunchers at their own game **MAKE BETTER INVESTMENTS TAKE CONTROL OF YOUR SOCIAL MEDIA HANDLE RISK RATIONALLY** With Professor Giansiracusa as your guide you'll learn how to reclaim agency over the decisions you make every day In a society designed to take from the poor and give to the rich maths has the potential to be a powerful democratizing force Robin Hood Maths gives you the tools you need to think for yourself act in your own best interest and thrive

*The Oxford Handbook of Higher Education in the Asia-Pacific Region* Devesh Kapur, Lily Kong, Florence Lo, David M. Malone, 2023-01-20 Since the turn of the millennium it has become clear that the Asia Pacific Region is economically the fastest growing continent in the world and is likely to remain so for some time despite the setbacks of the COVID 19 pandemic Asia Pacific's share of the world's Gross Domestic Product GDP doubled from 15 per cent to 30 per cent between 1970 and 2017 and is projected to account for half of global GDP by 2050 With South East and South Asia also growing rapidly with over half the world's population and three of the world's five largest economies Asia is soon poised to home half of the world's middle class a class that is both the driver and the product of higher education The quality of a country's system of higher education may be seen both as a gauge of its current level of national development as well as of its future economic prospects It is therefore natural that the putative Asian Century should generate interest in the region's higher education systems which on the one hand share common characteristics a fixation with credentials and engineering high technology especially among male students and business degrees while at the same time are also highly differentiated not only across countries but also within As such a better understanding of higher education achievements failings potential and structural limitations in the Asia Pacific Region is imperative This handbook presents a number of significant country case studies and documents cross cutting trends relating to among other things the trilemma faced by governments juggling competing claims of access accessible cost and quality the balance between teaching and research the links between labour markets demand and higher education supply preferred fields of study and their consequences the rise of the research university in Asia the lure of institutions of international reputation within the region new education technologies and their effects and trends in government policy within the wider region and sub regions

*Robin Hood Math* Noah

Giansiracusa,2025-08-05 How the rich and powerful use math to exploit you and what you can do to beat them at their own game Everything we do today is recorded as data that is sold to the highest bidder Plugging our personal data into impersonal algorithms has made government agencies more efficient and tech companies more profitable But all this comes at a price It is easy to feel like an insignificant number in a world of number crunchers who care more about their bottom line than your humanity It is time to flip the equation turning math into an empowering tool for the rest of us Award winning mathematician Noah Giansiracusa explains how the tech giants and financial institutions use formulas to get ahead and how anyone can use these same formulas in their everyday life You will learn how to handle risk rationally make better investments take control of your social media and reclaim agency over the decisions you make each day In a society that all too often takes from the poor and gives to the rich math can be a vital democratizing force Robin Hood Math helps you to think for yourself act in your own best interests and thrive
