Review of Hyperbaric Therapy & Hyperbaric Oxygen Therapy in the Treatment of Neurological Disorders According to Dose of Pressure and Hyperoxia Paul Gregory Harch,, Enrico M. Camporesi,,Dominic D'Agostino,John Zhang, George Mychaskiw II, Keith Van Meter,2024-11-18

Hyperbaric therapy and hyperbaric oxygen therapy are treatments that have vexed the medical profession for 359 years Hyperbaric therapy consisted of the exclusive use of compressed air from 1662 until the 1930s 1950s when 100% oxygen was introduced to recompression tables for diving accidents Broader clinical application of 100% hyperbaric oxygen to radiation cancer treatment severe emergent hypoxic conditions and blue baby operations occurred in the late 1950s 1960s Since that time hyperbaric oxygen therapy has become the dominant term to describe all therapy with increased pressure and hyperoxia It has been defined as the use of 100% pressurized oxygen at greater than 1.4 or 1.0 atmospheres absolute ATA to treat a narrow list of wound and inflammatory conditions determined by expert opinions that vary from country to country This modern definition ignored the previous 300 years of clinical and basic science establishing the bioactivity of pressurized air The Collet et al randomized trial of hyperbaric oxygen therapy in cerebral palsy in 2001 exposed the flaws in this non scientific definition when a pressurized oxygen and a pressurized air group misidentified as a placebo control group achieved equivalent and significant cognitive and motor improvements This study confused the hyperbaric medicine and neurology specialties which were anchored on the 100% oxygen component of hyperbaric oxygen therapy as a necessary requirement for bioactivity These specialties were blind to the bioactivity of increased barometric pressure and its contribution to the biological effects of hyperbaric hyperbaric oxygen therapy Importantly this confusion stimulated a review of the physiology of increased barometric pressure and hyperoxia and the search for a more scientific definition of hyperbaric oxygen therapy that reflected its bioactive components Visit New scientific definitions hyperbaric therapy and hyperbaric oxygen therapy The purpose of this Research Topic is to review the science of hyperbaric therapy hyperbaric oxygen therapy according to its main constituents barometric pressure hyperoxia and possibly increased pressure of inert breathing gases and review the literature on hyperbaric therapy hyperbaric oxygen therapy for acute to chronic neurological disorders according to the dose of oxygen pressure and inert breathing gases employed Contributing authors are asked to abandon the non scientific and restrictive definition of hyperbaric oxygen therapy with its arbitrary threshold of greater than 1.0 or 1.4 atmospheres absolute of 100% oxygen and adopt the more scientific definitions of hyperbaric and hyperbaric oxygen therapy Those definitions embody therapeutic effects on broad based disease pathophysiology according to the effects of increased barometric pressure hyperoxia and inert breathing gases Recent basic science research has elucidated some of these effects on gene expression Researchers have demonstrated that increased pressure and hyperoxia act independently in an overlapping fashion and interactively to induce epigenetic effects that are a function of the dose of pressure and hyperoxia Differential effects of pressure and hyperoxia were revealed in a

systematic review of HBOT in mTBI PPCS where the effect of pressure was found to be more important than hyperoxia In retrospect the net effect of HBO on disease pathophysiology in both acute and chronic wounding conditions has been demonstrated for decades as an inhibition of inflammation stimulation of tissue growth and extensive effects on disease that are pressure and hyperoxic dose dependent This Special Topics issue will focus on the scientific definitions of hyperbaric and hyperbaric oxygen therapy principles of dosing and an understanding of many neurological diseases as wound conditions of various etiologies Contributing authors should apply these concepts to articles on the basic science of hyperbaric hyperbaric oxygen therapy and their clinical applications to acute and chronic neurological diseases

Achieving sustainable production of poultry meat Volume 3 Todd Applegate, 2017-08-31 To meet growing demand the FAO has estimated that world poultry production needs to grow by 2 3% per year to 2030 Much of the increase in output already achieved has been as a result of improvements in commercial breeds combined with rearing in more intensive production systems However more intensive systems have increased the risk of transmission of animal diseases and zoonoses Consumer expectations of sensory and nutritional quality have also never been higher At the same time consumers are more concerned about the environmental impact of poultry production as well as animal welfare Drawing on an international range of expertise this book reviews research on poultry health and welfare Part 1 begins by reviewing the range of diseases and other health issues affecting poultry It then goes on to discuss ways of preventing and managing disease such as breeding and means of attenuating the immune system The second part of the book discusses welfare issues such as management of breeding flocks housing transport and humane slaughter techniques *Achieving sustainable production of poultry meat Volume 3* Health and welfare will be a standard reference for poultry and food scientists in universities government and other research centres and companies involved in poultry production It is accompanied by two further volumes which review safety quality and sustainability as well as poultry breeding and nutrition

Cancer Plasticity and the Microenvironment: Implications for Immunity and Therapy Response Petranel T. Ferrao, Erik W. Thompson, Andreas Behren, Robin L. Anderson, 2019-11-01 Cancer cells can change and adapt especially within the host environment a phenomenon known as cancer plasticity Several factors including the immune system can influence and be influenced by cancer plasticity which in turn can impact upon patient responses to treatment As such we currently face several challenges for implementing combination therapies as effective cancer treatment strategies We have compiled a topic with a number of articles that emphasize the various aspects of cancer plasticity describing in particular the important role of the tumor microenvironment As we embark on a new era of precision medicine with multi modal therapies for improving patient outcomes this topic highlights some relevant points for consideration that are pertinent to the incorporation and effective use of new treatments as part of cancer treatment regimens including immune modulating drugs
